LIST OF TABLES

Chapter 1: Introduction and Review of Literature
Table 1.1 Recommended dietary allowance (RDA) for Indian females 26
Table 1.2 Recommendations for Dietary Calcium (mg/d) in female children, adolescents and adults 30
Table 1.3 Recommendations for Dietary zinc (mg/d) in female children, adolescents and adults 37

Chapter 2: Factors Influencing Bone Status in Premenarchal Girls
Table 2.1 Classification of Tanner stage for girls 55
Table 2.2 Anthropometric characteristics of the girls 57
Table 2.3 Bone parameters of the girls 59
Table 2.4 Bone health status based on Z scores in the study population 60
Table 2.5 Bone health status of girls compared with Indian and Caucasian reference databases 61
Table 2.6 Daily activity pattern of the study population 63
Table 2.7 Nutrient intakes of the girls 65
Table 2.8 Biochemical parameters of the girls 67
Table 2.9 Nutritional status of the study population as per Indian and CDC reference standards 69
Table 2.10 Correlation coefficients of bone parameters with anthropometric parameters 72
Table 2.11 Significant factors influencing total body bone mineral content (TBBMC) using generalized linear model analysis 76

Chapter 3: Comparison of Bone Status in Premenarchal Girls with Respect to Socioeconomic Status and Puberty
Table 3.1 Anthropometric parameters in the two socioeconomic groups 84
Table 3.2 Age wise bone and body composition parameters of the two groups
Table 3.3 Correlation coefficients between anthropometric, body composition and bone parameters
Table 3.4 Adjusted means of bone parameters in two groups
Table 3.5 Tanner wise bone parameters in the two socio-economic groups across Tanner stage

Chapter 4: Efficacy of One Year Supplementation of Calcium, Vitamin D and Zinc on Bone Health of Premenarchal Girls

Table 4.1 Anthropometric characteristics of the study population at baseline, midline and endline
Table 4.2 Nutrient intakes of the study population at baseline and endline
Table 4.3 Biochemical parameters of the study population at baseline and endline
Table 4.4 Bone parameters and body composition of the study population at baseline and endline
Table 4.5 Mean bone Z scores in the study population at baseline and endline
Table 4.6 Bone health status of the study population post intervention with respect to their Z scores

Chapter 5: Effect of Calcium and Zinc Supplementation on Height Velocity of LSES Premenarchal Girls vs. Unsupplemented HSES Girls

Table 5.1 Comparison of anthropometric characteristics between supplemented groups (LSES) and age-matched unsupplemented controls from HSES at baseline and endline
Table 5.2 Change in height-for-age Z score in the study population
Chapter 6: Risk Factors for Low Bone Status in Women above 40 Years of Age

Table 6.1 General characteristics of the study population 148
Table 6.2 Percent women as per BMI classification 149
Table 6.3 Bone parameters at lumbar spine in the study population 150
Table 6.4 Bone parameters at dual femurs in the study population 150
Table 6.5 Daily activity pattern in the study population 153
Table 6.6 Nutrient intakes of the study population 155
Table 6.7 Clinical signs and symptoms in the study population 157
Table 6.8 Biochemical parameters in the study population 159
Table 6.9 Correlation coefficients of bone parameters with anthropometric factors 161
Table 6.10 Significant factors influencing bone mineral density at the three sites using generalized linear model analysis 166
Table 6.11 Anthropometric factors as determinants of bone mineral density 167
