ACKNOWLEDGEMENTS

I remember with a profound sense of gratitude the Late Professor V.S. Seturaman who was a source of strength and inspiration to me at all times. His concern for me, his affection and the meticulous manner in which he discussed my project provided me with the drive needed for developing a class-room oriented project into a Ph.D. dissertation. I have therefore dedicated this research thesis to him.

I am grateful to Dr. C.T. Indra for agreeing to be my supervisor.

I place on record the tremendous help and support received from Professor N. Krishnaswamy in the writing of this thesis. He gave freely and ungrudgingly his time and the discussions with him were inspiring.

I thank also Mrs. Krishnaswamy for her encouragement and kind hospitality.

To Dr. T. Sriman, CIEFL, Hyderabad, I owe a debt of gratitude for carefully going through the thesis and making suggestions which led to the significant improvement in the design of the thesis and its style.

Professor K.N. Sivaraman, Director, State Institute of English, Government of Tamil Nadu, read through the proof and suggested some important changes and helped me revise the draft for which I thank him.

Professor Jacob Tharu, Head, Dept. of Evaluation, CIEFL, Hyderabad, gave me valuable insights on evaluation techniques in general and project evaluation in particular and I gratefully remember his help.

Without the support and blessings of Lt. Gen. I.S. Gill, Secretary and Correspondent, Guru Nanak College, Madras, I could not have embarked on this project. Professor T.V. Ramana, Principal, Guru Nanak college, Madras gave me moral support and showed great understanding during the period of my research work.

I place on record my profound appreciation and gratitude to Lt. Gen. I.S. Gill and Professor T.V. Ramana.

The one person who stood by me from the very beginning till the completion of the project and gave his whole-hearted support and unstinted co-operation is Dr. H. Kothandaraman, Head, Dept. of Polymer Chemistry, AC College of Technology, University of Madras. The conception, design and implementation of the project were all made possible because of the trust Dr. Kothandaraman reposed in me and the breadth of his vision which motivated me. He permitted me to try out the experiment and hold classes for the students of M.Sc. Polymer Chemistry for three years (1988-91). I acknowledge the great help I received from him.
A number of persons, experts in the field and friends alike in one way or another helped me in completing my research work. These include teachers and students, especially, students of M.Sc. Polymer Chemistry, A.C. College of Technology during 1988-91.

I cannot thank these important people adequately and will have to be content with a general expression of thanks.

I remember my late mother gratefully at this moment.

Finally, my father, my wife, Usha and my little daughters, Sowparnika and Sowgandika patiently bore with my long absences from home while I engaged myself in the project. Their love and support mean a world to me.
