Acknowledgement

This work is the result of four years of research efforts during my Ph.D. studentship. Most of such work would have not been possible without the support of many people that I wish to thank. First of all, all my gratitude goes to my supervisor Prof. Priti Gupta, who supported me all the time by guiding my work on the right direction. I am also thankful to her for patiently reviewing and improving my work. Without her trust and support this thesis would not have been possible.

I would like to thank Prof. Shashi Bahl, Head, Department of Statistics for her help and support during my research work. My thanks are also due to Prof. Ashok Kumar, Prof. Suresh Chander Malik, Prof. Madhulika Dube and Prof. Ratna Raj Laxmi for all the support and encouragement during my stay in the department.

I have no words to express my feelings towards my respected parents Sh. Hari Krishan and Smt. Prem Lata, who gave full support to lay the foundation of higher learning in my thoughts and blessed me to complete my work. This work would have not been possible in execution without their deep interest, unending blessings and timely encouraging advices.

I am thankful to my fellow researcher Mr. Prince Goyal, for his kind co-operation, painstaking efforts and intrinsic help during the study.

I am also thankful to all the non-teaching staff members of the Department of statistics, M.D. University, Rohtak. This acknowledgement will remain incomplete without emphasizing indebtedness to all the known and unknown authors, whose works I had consulted frequently for the completion of the research work. I extend my gratefulness to the authorities of libraries of Delhi University, IIT Delhi, IIT Kharagpur, IIT Roorkee, ISI Delhi, for permitting me to consult all the relevant literature.

(Vijay Kumar)
