PART - I

CHAPTER I GENERAL 1-24

1.1 Introduction 2

1.1.1 Global Distribution – Spatial and Temporal
1.1.2 Type and Modes of Occurrence and Association
1.1.3 Applications of PGM’s
1.1.4 World Mine Production and Reserves
1.1.5 PGE Mineralization: Indian Scenario

1.2 Aims and Objectives 7

1.3 Scope of the work 8

1.4 Methods of study 8

1.4.1 Field investigation and Geological mapping
1.4.2 Microscopic study
1.4.3 Drill core study
1.4.4 Analytical Methods

1.5 Location and Accessibility 12

1.6 Topography, Drainage and Vegetation 12

1.7 Review of the Previous Work 13

1.8 General Geology 16

1.8.1 Dharwar Craton
1.8.2 Mafic-ultramafic Complex of Western Dharwar Craton
1.8.3 Shimoga Basin: General geology, Lithostratigraphy, Structure and Metamorphism

PART-II

CHAPTER II HEGDALE GUDDA FORMATION 25-43

2.1 Introduction 26

2.2 Salient Lithostratigraphic Characteristics 26

2.3 Field Occurrence and Petrography 30

2.4 Geochemistry

2.4.1 Major and Trace element data
2.4.2 PGE Geochemistry

2.5 Discussion and Petrogenetic Interpretation 41
PART-III  HANUMALAPUR SEGMENT

CHAPTER III  OUTCROP STUDY  44-74

3.1 Introduction  45

3.2 Geology  45
   3.2.1 Field occurrence
   3.2.2 Zonal variation and layered characteristics
   3.2.3 Sheared contact
   3.2.4 Structural Geology
   3.2.5 Metamorphism

3.3 Magnetic Survey  48

3.4 Petrology  51
   3.4.1 Classifications
      i. Gabbro
      ii. Magnetites
      iii. Ultramafites
         (a) Fine-grained
         (b) Coarse grained
      iv. Anorthosite
      v. Ultramafic dykes

3.5 Geochemistry  54
   3.5.1 Major and trace element data
   3.5.2 Rare earth element data
   3.5.3 PGE Distribution in the Hanumalapur segment
      i. PGE in the Fine-grained ultramafite
      ii. PGE in the chromiferrous magnetite
      iii. Metal ratio plots

CHAPTER IV  DRILL CORE STUDY  75-112

4.1 Introduction  76

4.2 Exploratory Core Drilling  76

4.3 Lithologging of Drill Cores  78

4.4 Petrological Study  82
   4.4.1 Classification and Petrographic Description
      i. Chlorite-chromite schist (chromitite)
      ii. PGE mineralized Picritic zones
      iii. Chloritic-amphibole schist
      iv. Amphibole-chlorite-magnetite schist with sulphides
      v. Meta-pyroxenite (coarse grained ultramafite)
      vi. Ti-Magnetite
vii. Gabbroic anorthosite
viii. Mela-gabbro
ix. Quartz diorite

4.5 Geochemistry
4.5.1. Major and trace elements
4.5.2 PGE Mineralization identified by drill core samples
4.5.3 Gold associated with PGE mineralization

CHAPTER V DISCUSSION AND COMMENTS ON PETROGENESIS 113-135

5.1 Introduction 114
5.2 Layered Character 115
5.3 Significance of Petrological characteristics 115
5.4 Significance of Geochemical characteristics 116
5.5 Magmatic vs Hydrothermal mineralization 124
5.6 Proposed interpretation of the Hanumalapur PGE mineralization 126
5.7 Nature of magma 132
5.8 Reconstruction of the Geological history of the Hanumalapur complex 133
5.9 Approximate Ore Reserves 135

CHAPTER VI SUMMARY AND CONCLUSIONS 136-142

6.1 An Overview 137
6.2 Hegdale Gudda Formation 138
6.3 Hanumalapur segment 138
6.4 Comments on commercial potential of the Hanumalapur PGE Prospect 141
6.5 Conclusions 142
