List of Tables

Table 1.1. Prevalence of diabetes in different geographic regions of the world.

Table 2.1. Population distribution in Mysore district, Karnataka.

Table 2.2. Conserved elements predicted by phast cons after analysing 28 way placental mammal alignment in UCSC genome browser.

Table 2.3. ΔG cutoff values used for primer selection.

Table 2.4. Summary of primers used in the present study.

Table 3.1. Results of covariates in non-diabetic controls and type 2 diabetes cases.

Table 3.2. Summary of lifestyle habits and medication status.

Table 3.3. Summary of Hardy-Weinberg equilibrium test for SNPs in the controls.

Table 3.4. Tests for allelic association with type 2 diabetes.

Table 3.5. Summary of genotype association with type 2 diabetes.

Table 3.6. Genotype association with fasting plasma glucose level.

Table 3.7. Genotype association with 2 h plasma glucose level.

Table 3.8. Genotype association with systolic blood pressure.

Table 3.9. Genotype association with diastolic blood pressure.

Table 3.10. Genotype association with BMI.

Table 3.12. Haplotype association with type 2 diabetes.
List of Figures

**Figure 1.1.** Role of ATP-sensitive K+ (KATP) channels in insulin secretion

**Figure 1.2.** Functional role of KATP channels and location of mutations

**Figure 2.1.** A. Map of India showing location of Karnataka state.  
B. Map of Karnataka showing location of Mysore district.

**Figure 2.2.** Population distribution in relation to area in Taluks of Mysore district, Karnataka.

**Figure 3.1.** Linkage Disequilibrium (LD) plot of studied genes.
