TABLE OF CONTENTS

Chapter I: Introduction 1-61
   Barriers for cellular uptake
   Viral vectors
   Non-viral Vectors
      (a) Physical methods
      (b) Chemical methods
   Recent advances in nanotechnology
   Scope and objectives of the present work
   References

Chapter II: Materials and Methods 62-75
   Sources of cell culture materials and chemicals
   Animals
   Instruments
   Size and morphology of nanocomposites/nanoparticles and their DNA complexes
   Zeta potential measurements
   Plasmid isolation
   DNA retardation assay
   Cell cultures
      In vitro DNA delivery
      In vitro siRNA delivery
   Quantification of GFP expression
   Fluorescence-activated cell sorting (FACS) analysis
   Cell viability assay
   Cellular trafficking by confocal microscopy
   DNase I protection assay
   DNA release assay
   Protein adsorption assay
      In vivo gene expression studies in Balb/c mice
   Statistical analysis
   References
Chapter III: Gellan-gum Blended PEI Nanocomposites as Gene Delivery Agents: Evidences From In vitro and In vivo Studies

Introduction
Experimental section
Results & discussion
References

Chapter IV: 1,4-Butanediol Diglycidyl Ether (BDE)-Crosslinked PEI-g-Imidazole Nanoparticles as Nucleic Acid-Carriers In vitro and In vivo

Introduction
Experimental section
Results & discussion
References

Chapter V: Linear PEI Nanoparticles: Efficient pDNA/siRNA Carriers In vitro and In vivo

Introduction
Experimental section
Results & discussion
References

Chapter VI: Copolymer of Covalently Crosslinked Linear and Branched PEIs as Efficient Nucleic Acid Carriers In vitro and In vivo

Introduction
Experimental section
Results & discussion
References

Chapter VII: Biodegradable Poly (vinyl alcohol)-Polyethylenimine Nanocomposites for Enhanced Gene Expression In Vitro and In Vivo

Introduction
Experimental section
Results & discussion
References
