List of Tables

2.1 $K^*$ and $\textit{ETP}$ for selected $\eta$ and $\theta$. ................................. 38

3.1 Optimum $c$ and $\textit{ETP}$ for selected $\theta$ ................................. 62

3.2 Optimum $K$ and $\textit{ETP}$ for selected $\theta$ ................................. 62

3.3 Effect of $K$ and $\theta$ on some selected measures when $c = 2, 4$ 66

3.4 Effect of $K$ and $\theta$ on some selected measures when $c = 6, 8$ 67

4.1 The intensities of transitions from macro-state $(i, n, 0, j)$, $i \geq c - n$ .................................................. 79

4.2 The intensities of transitions from macro-state $(i, n, k, j)$, $i \geq c - n, k \geq 1$ ................................. 80
4.3 The intensities of transitions from macro-state \((i, n, 0, j), i < c - n\) .......................... 81

4.4 Effect of Fundamental arrival rate \(\lambda\) .......................... 99

4.5 Effect of Fundamental interruption arrival rate \(h\) when \(\lambda = 6; 103\)

4.6 Effect of \(\mu_1\) and \(\mu\) on some selected measures ..................... 104

4.7 Effect of number of servers in system-2 ......................... 106

5.1 Some selected measures when \(\lambda = 3, \mu_1 = 3, \mu_2 = 4, \gamma = 2\) 126

5.2 \(P_{bsyp}\) and \(P_{bsyp}\) for selected \(\theta\) and \(\mu_2\) values .................. 129
