### Chapter 1: Introduction ........................................ 1-18

1.1 Integrated Product Design and Concurrent Engineering 1

1.2 Manufacturing Information Modelling 7

1.3 Process Planning Systems and Some New Approaches 12

1.4 The Work in the Thesis 17

1.5 Organization of the Thesis 18

### Chapter 2: Literature Review ..................................... 19-46

2.1 Overview of the Information System for Integrated Product and Process Planning 19

2.2 Manufacturing Information Modeling 24

2.3 Feature Technology and Feature Manufacturing Strategies 30

2.4 Information Modeling Technologies 33

2.5 Database Application for Decision-making 35

2.6 Gaps Observed from Literature Review 40

2.7 Research Issues 41

2.8 Research Objectives 42

2.9 Research Methodology 44

2.10 Conclusion 45

### Chapter 3: Concurrent Engineering and Information System for Product Development .......... 47-84

3.1 Concurrent Engineering 47

3.2 Systems Engineering Based Approach for Product and Process Concurrent Design 49
3.3 Understand the Advantages - Industry Experience  ..........  52
3.4 Traditional Versus Concurrent Design ............................  54
3.5 DFM and Concurrent Engineering .................................  56
3.6 Design for Manufacturability ........................................  57
3.7 Understanding Manufacturing .................................  61
3.8 Basic Process Planning Systems ........................................  66
3.9 Some New Approaches ...........................................  68
3.10 A New Wave of Database Applications ..............................  70
3.11 Need of Object-Oriented Database Management Systems  74
3.12 Data Mining and the IPPPIS ........................................  76
3.13 Group Technology and Classification Systems ..............  79
3.14 Existing GT Classification and Coding Systems ..........  82
3.15 Conclusion ..........................................................  83

Chapter 4: Information Content and its Codification in the System Developed 85-136

4.1 Methodology for Developing a Classification and Coding System ...........................................  86
4.2 Coding and Classification System Developed for the Machine Tool Manufacturing Firm .................  88
4.3 Coding System for Processes.................................  111
4.4 Manufacturing Plan Generation ........................................  116
4.5 Manufacturing Plan Generation in IPPPIS Developed 119
4.6 Conceptual Process Planning Information Modelling Fundamentals ...........................................  123
4.7 Manufacturing Cost and Time Calculation Method 124
4.8 Coding Example ..........................................................  127
4.9 Automated Coding and Retrieval of Parts in the IPPPIS 132
4.10 Conclusion ..........................................................  135

Chapter 5: The Process Design and Information Modeling 137-165

5.1 Introduction ..........................................................  137
5.2 Task Clarification of the IPPPIS .......................... 138
5.3 Process Planning Approach in the IPPPIS .................. 140
5.4 Process Planning in the IPPPIS .............................. 142
5.5 IPPPIS Functional Structure ................................. 146
5.6 Type of Information used in the IPPPIS ..................... 150
5.7 Design Retrieval and Cost Reduction Through Automated Coding .................................. 151
5.8 Information Content in the Model .......................... 152
5.9 Object-Oriented Systems Analysis (OSA) Approach ....... 155
5.10 Systematic Information Modeling Used ..................... 161
5.11 UML Class Diagram for the Information Modeling ...... 162
5.12 Conclusion ..................................................... 164

Chapter 6 Information Models Used in the IPPPIS 166-200
6.1 Information Exchange between Preliminary Design and Preliminary Process Planning ....................... 166
6.2 Feature Information Modeling for Part Families ........... 174
6.3 Process Modeling for Manufacturing Strategies of Features .................................................. 177
6.4 Manufacturing Plan Generation ............................. 183
6.5 Manufacturing Activity Model ............................... 185
6.6 Manufacturing Resource Model ............................. 188
6.7 Manufacturing Cost and Time ............................... 197
6.8 Conclusion ..................................................... 200

Chapter 7 System Implementation Case Study 201-252
7.1 Overview of Machine Tool Industry ......................... 201
7.2 Case Study ..................................................... 205
7.3 Conventional Process Planning System and Product Development ................................................. 211
7.4 Benefits of CE and New Process Planning System in the IPPPIS ............................................ 215
7.5 Architecture of the IPPPIS .................................... 221
7.6 Information Content in the System Developed .......... 223
7.7 Use of Information Model for Lean Manufacturing 225
7.8 Use of Information Model for Agile Manufacturing 229
7.9 Framework for Agile Manufacturing System for Machine Tool Industry 230
7.10 Integration of Product Models and Process Models for Agile manufacturing in the IPPPIS 232
7.11 Other Benefits Obtained from the IPPPIS 235
7.12 Implementation Example ........................................ 239
7.13 Conclusionof the Case Study - Benefits of Concurrent Engineering Implementation ................................. 245
7.14 Conclusion .......................................................... 251

Chapter 8 Conclusion, Limitations and Scope for Further Work ......................................................... 253-258
8.1 Conclusion ............................................................... 253
8.2 Limitations ............................................................ 256
8.3 Scope for Further Work .............................................. 256

REFERENCES ................................................................. 259-271
LIST OF PUBLICATIONS ............................................... 272

APPENDIX ................................................................. 273-352
Appendix 1: Details of Metallic Material Specification 273-278

Appendix 2: Specification Details of Castings and Steel used with Heat Treatment Details ...... 279-290
Appendix 3: Details of Surface Condition and Size Numbering Metallic Material ................. 291-294
Appendix 4: Details of the Fits, Tolerance, Surface finish and Different Standards ................. 295-299
Appendix 5: Details of the Fits, Form Tolerance, Surface Finish Achieved by Different Manufacturing Process and Manufacturing Standards ........................................ 300-303
Appendix 6: Details of the Different Machining Process Followed in a Machine Tool Company ....... 304-310

Appendix 7: Best of Manufacturing Practices Followed in a Machine Tool Company ................. 311-315

Appendix 8: Process Capability Estimation Methods used in Machine Tool Manufacturing Company .......................... 316-323

Appendix 10: Other Screens Developed as Part of the System ..................................................... 334-343

Appendix 11: The Structure of the Information Stored in Database ............................................ 344-352
