List of Tables

4.1 Excitation energies in keV, initial and final spins for the transitions, \( \gamma \)-ray energies in keV, relative intensities, DCO ratio and the multipolarity of the transitions belonging to \( ^{122} \)Cs nucleus ......................................................... 96

4.2 Single Particle Energies of both Protons and Neutrons ........................................ 106

4.3 Quasiparticle orbitals as labeled in figure 4.11 with their Nilsson components. The calculations were performed with \( \beta_2=0.27 \) and \( \gamma = 0^\circ \) ........................................ 113

5.1 Excitation energies in keV, initial and final spins for the transitions, \( \gamma \)-ray energies in keV, relative intensities, DCO ratio and the multipolarity of the transitions belonging to \( ^{52} \)Cr nucleus ............................................................ 130

6.1 Excitation energies in keV, initial and final spins for the transitions, \( \gamma \)-ray energies in keV, relative intensities, DCO ratio and the multipolarity of the transitions belonging to \( ^{178} \)Os nucleus ............................................................ 152
