List of Tables

2.1 BBM inequality for the ground state of the Pöschl-Teller potential as a function of number of bound states $(n)$. ............................................................. 33

4.1 The FC factors and the values of r-centroids for Morse potential parameters $j_1 = j_2 = 5; \beta_1 = \beta_2 = 0.9\text{Å}^{-1}, R_1 = 2.67\text{Å} \text{and } R_2 = 3.60\text{Å}$. The first line correspond to FC factors and second line corresponds to r-centroid values. 82

5.1 Charmonium radial wave functions in various potential models. Column 1 is for Buckmuller and Tye; 2 for power law potential; 3 for logarithmic potential and 4 is for Cornell potential. The last column gives the known experimental data. ............................................................. 108

5.2 Bottomium radial wave functions in various potential models. Column 1 is for Buckmuller and Tye; 2 for power law potential; 3 for logarithmic potential and 4 is for Cornell potential. The last column gives the known experimental data. ............................................................. 108
