ACKNOWLEDGEMENT

It was the dream of my mother who wanted me to be a doctor, which brings me here in research. The PhD life includes collection of experiences which prepares us for a bigger role in future. During this venture, we come across numerous people who just play their roles and leave their footprints. I, hereby, would like to convey my gratitude to all the people who provided the raw material in nurturing and growth of a master student into a PhD student.

As the diamond cutter gets involved in the tireless job of cutting and polishing the stone into a sparkling diamond, the stone gets metamorphosed into the diamond and looks at the diamond cutter with respect and gratitude. Although I am not a diamond, but have undergone transformation due to the untiring efforts of my mentor Dr. Neeru Saini. First and foremost, I offer my heartfelt gratitude to my PhD advisor. I would like to appreciate her patience and efforts in polishing me into a student who can perform a cutting edge science. She has taught me to dream and put undeterred labour to achieve the dream. Her critical evaluation and scolding motivated me to accept the challenges. Her support and faith in my capabilities made my PhD journey successful. Being her first project assistant, I am very fortunate to learn scientific acumen of performing experiments from her. I am fortunate to be associated with her during my PhD.

I am thankful to Prof. Samir K Brahmachari (former Director IGIB and present DG-CSIR), Dr. K.C Gupta (former Acting Director IGIB) and Dr. Rajesh Gokhale, Director IGIB, for giving me the opportunity to work in this institute and providing excellent research facilities within the institute. The interactions with Prof. Samir K Brahmachari will always remain a memorable experience. His insights on science and its related facets were always thought provoking. I would always feel privileged to have interacted with him.
My foremost gratitude goes to Dr. Yogendra Singh who as a teacher and committee advisor always supported and encouraged me during my transformation from a master’s student to a PhD student.

During my stay at IGIB, I got the opportunity to interact with great scientists. I would also like to express my gratitude towards Dr. Balram Ghosh, Dr. Anurag Aggarwal, Dr. Beena Pillai, Dr. Souvik Maiti and Dr. Sridhar Sivasubbu for providing critical review of my work in the presentations I gave in the institute. I would also like to acknowledge the scientists at IGIB for letting me use their lab facilities.

I thank CSIR for providing financial support for pursuing my PhD and to University of Pune for my PhD registration.

The PhD journey would have been incomplete without the company of my lab members. My special thanks to Anita for being an excellent senior as well as my supporter who trained me in couple of experiments.

I would also like to thank Ravindresh who did cloning of hsa-miR-128 and kindly gave it to me for performing my research. Words would be limit for him as he helped and supported me whenever i needed, specially for microarray experiment.

I would like to acknowledge my colleague Richa Singh for her incredible help and dedicated support throughout my tenure. I am also grateful to my juniors Richa Dubey, Vikas Yadav, Shruti Chowdhari, U. Sindhuri for maintaining a conducive and refreshing environment in the lab and their help.

A special note of heartful thanks to my friends Andaleeb, Anita Mann, Anirban Kar, Amit Pandey, Gaurav Verma, Gunjan, Kartik, Priyanka, Sanjiv, Shreyans, Saurabh, Kirandeep with whom i had memorable time at IGIB. I would also like to thank to all the members of lab 608 and 308 for their help and support from whom I borrowed a number things on non-returnable basis.
Words would be very little to express my feeling and gratitude for my family. Their firm belief in me and constant support has always been a motivation to achieve newer heights. My parents, sisters, brother, my in-laws, were always a source of inspiration to me. Words are not enough to express my feeling for Kapil, my husband (truly my better half) for his unconditional love and constant support. He is and will always be the pillars of my strength. Without him this journey would have been impossible.

My thesis would be incomplete without the mention of Mannat (my one and a half year old son) who has added beautiful colors to my life. Thank you my son for being the part of this journey.

Above all, I thank to God for everything and being with me.

Yogita K. Adlakha
