CONTENTS

CHAPTER 1 INTRODUCTION

II REVIEW OF RELATED LITERATURE AND FORMULATION OF HYPOTHESES

A. Cognitive vulnerability and depression
B. Depression in relation to stressful life events
C. Depression in relation to life-events & cognitive vulnerability
D. Anxiety and depression
E. Depression in relation to hostility and locus of control
F. Gender differences in depression
Formulation of hypotheses

III METHOD

SAMPLE

DESCRIPTION OF TESTS

A. Measures of Depression
   Beck Depression Inventory
   Minnesota Multiphasic Personality Inventory D-scale
   Zung Self-Rating Depression Scale
B. Cognitive Assessment Measures
   Automatic Thought Questionnaire
   Hopelessness Scale
   Dysfunctional Attitude Scale
C. Rotter's Internal-External Scale
D. Eysenck Personality Questionnaire
CHAPTER
E. Life Experiences Survey
F. IPAT Anxiety Scale Questionnaire
G. Sex-Role Inventory
Administration of Tests
Scoring of the Tests
Analyses

IV RESULTS AND DISCUSSION
A. Frequency distributions of scores on the tested variables
B. Reliability of different measures
C. Comparison of employed and non-employed married women on different measures
D. Intercorrelations between different measures
1. Intercorrelations among three measures of depression
2. Intercorrelations among psychometric measures of anxiety, neuroticism, psychoticism, extroversion and social desirability
3. Correlations of different depression measures with other variables
E. Structural relationship among the tested variables
1. Employed married women
2. Non-employed married women
