

LIST OF FIGURES

	Page No.
Fig. 1A. Map showing study sites in Shimoga district	20
Fig. 1B. Map showing study sites in Chikmagalur district	21
Fig. 1C. Map showing study sites in Hassan district	22
Fig. 2. Average rainfall and temperature data from March 2006 to March 2009 (3 years) recorded at meteorological station at Shimoga	23
Fig. 3. Average rainfall from 2005 to 2009 (5 years) recorded at meteorological station at Hassan	24
Fig. 4. Average rainfall from 2005 to 2009 (5 years) recorded at meteorological station at Chikmagalur	24
Fig. 5. Average rainfall from 2005 to 2009 (5 years) recorded at meteorological station at Shimoga	25
Fig. 6. Diagrammatic representation of a transect laid in the study area	26
Fig. 7. Photograph showing different lichen substances at TLC test	31
Fig. 8. Venn diagram showing distribution of lichens on different substrates in Shimoga district	38
Fig. 9. Venn diagram showing distribution of lichens on different substrates in Chikmagalur district	38
Fig. 10. Venn diagram showing distribution of lichens on different substrates in Hassan district	38
Fig. 11. Growth forms of macrolichens recorded in Chikmagalur district	39
Fig. 12. Growth forms of macrolichens recorded in Shimoga district	39
Fig. 13. Growth forms of macrolichens recorded in Hassan district	39
Fig. 14. Micro habitat preference of macrolichens in Shimoga district	55

Fig. 15.	Micro habitat preference of macrolichens in Chikmagalur district	55
Fig. 16.	Micro habitat preference of macrolichens in Hassan district	56
Fig. 17.	Venn diagram showing distribution of lichens in different forest types of Shimoga district	69
Fig. 18.	Venn diagram showing distribution of lichens in different forest types of Chikmagalur district	70
Fig. 19.	Venn diagram showing distribution of lichens in different forest types of Hassan district	70
Fig. 20.	Chart showing association of different groups of algae in lichen formation in the identified macrolichen species	71
Fig. 21.	Genus level lichen diversity in three districts	73
Fig. 22.	Number of individuals of macrolichens with their family importance value (FIV) in three districts	91
Fig. 23.	Ordination DCA analysis lichen diversity with different forest types	93
Fig. 24.	Ordination DCA analysis of lichen diversity in different study sites	94
Fig. 25.	Ordination DCA analysis of lichen diversity in relation with different substrate	95
Fig. 26.	Ordination DCA analysis of different ecological parameters with forest types	96
Fig. 27.	Ordination DCA analysis of ecological parameters with different study sites	97
Fig. 28.	Cluster analysis of Sorensen similarity index of lichen genera based on transects in relation to distribution in forest types	98
Fig. 29.	Ordination DCA analysis in relation to bark peeling	117
Fig. 30.	Ordination DCA analysis in relation to bark texture	118
Fig. 31.	Diversity of lichens according to the GBH of host trees	119
