# CONTENTS

## Chapter 1. INTRODUCTION

1.1 Changing Scenario: Increasing prominence of hirsutum  
1.2 Exploitation of CGMS system  
1.3 The option of New A x R crosses  
1.4 The option of B x R crosses  
1.5 Stability parameters  
1.6 Gametophytic study of parental genotypes  
1.7 Molecular characterization of genotypes  

## Chapter 2. REVIEW OF LITERATURE

2.1 Cytoplasmic genetic male sterility  
2.2 Heterosis  
2.3 Combining ability  
2.4 Stability analysis  
2.5 *In vitro* pollen germination  
  2.5.1. Development of suitable *in vitro* pollen germination media  
  2.5.2. Variability in terms of germination percentage and tube length  
2.6 DNA finger printing.  

## Chapter 3. MATERIALS AND METHODS

3.1 Development of base material  
3.2 Development of crosses  
3.3 Experimental locations  
3.4 Experimental material  
3.5 Collection of data and recording of observations  
3.6 Statistical analysis  
  3.6.1 Layout of the experiment  
  3.6.2 Environment wise analysis of variance  
  3.6.3 Pooled analysis of variance  
  3.6.4 Combining ability analysis  
  3.6.5 Heterosis studies  
  3.6.6 Genotype-environment interaction  
  3.6.7 Stability analysis  
3.7 Development of suitable *in vitro* pollen germination media (PGM)  
  3.7.1 Pollen germination and tube growth  
3.8 RAPD Marker studies
Chapter 4. RESULTS

4.1 Analysis of variance
   4.1.1 ANOVA of A x R (CGMS based) group of hybrids 77
   4.1.2 ANOVA for B x R group of hybrids 77
   4.1.3 Common ANOVA 77

4.2 Potentiality of New A, B, R lines and heterosis of hybrids
   4.2.1 Mean performance and heterosis studies in A x R (CGMS) hybrids 80
   4.2.2 Mean performance and Heterosis studies in B x R conventional hybrids 88
   4.2.3 Comparative mean performance of A x R and B x R group of hybrids 97

4.3 Combining ability analysis
   4.3.1 Combining ability analysis of A x R (CGMS based) hybrids 99
   4.3.2 Combining ability analysis of B x R group of crosses 117
   4.3.3 Estimates of combining ability variances 136

4.4 Stability analysis
   4.4.1 ANOVA for stability 140
   4.4.2 Stability parameters 142

4.5 Gametophytic study of parental genotypes
   4.5.1 Development of suitable in vitro pollen germination media (PGM) 150
   4.5.2 Genotypic variation for in vitro pollen germination and vigour 153

4.6 Molecular characterization of genotypes 157

Chapter 5. DISCUSSION 164
Chapter 6. SUMMARY 223
