LIST OF TABLES

2.1.1 Variations in ambient temperature Feb 2002 to Jan 2003. 44
2.1.2 Physico-chemical characteristics of raw sewage (Feb 2002-Jan 2003). 45
2.1.3 Physico-chemical characteristics of settled sewage (Feb 2002-Jan 2003). 46
2.1.4 Physico-chemical characteristics of final effluents (Feb 2002-Jan 2003). 47
2.1.5 Seasonal variations in physico-chemical characteristics of raw sewage (Feb 2002-Jan 2003). 48
2.1.6 Seasonal variations in physico-chemical characteristics of settled sewage (Feb 2002-Jan 2003). 49
2.1.7 Seasonal variations in physico-chemical characteristics of final effluent (Feb 2002-Jan 2003). 50
2.1.8 Percent reductions in biological oxygen demand and phosphate in field WSP (Feb 2002-Jan 2003). 51
2.1.9 Monthly variations in the density of plankton of field WSP during Feb 2002-Jan 2003. 52
2.1.10 Density and diversity of plankton in field WSP during Feb 2002-Jan 2003. 53
2.1.11 Seasonal variations in plankton of field model WSP during Feb 2002-Jan 2003. 59
2.1.12 Classwise and seasonal diversity index of plankton from WSP during Feb 2002-Jan 2003. 60
2.1.13 Specieswise and seasonal diversity index of plankton from WSP during Feb 2002-Jan 2003. 61
2.2.1 Total helminthes eggs in the wastewater during Feb 2002-Jan 2003. 94
2.2.2 Variations in the helminth eggs in raw, settled and treated wastewaters of field stabilization ponds (Feb 2002-Jan 2003). 95
2.2.3 Percent reductions in the number of eggs of helminthes. 96
2.3.1 Characteristics of raw waste used for laboratory model WSP on zero day. 109
2.3.2 Physico-chemical characteristics of the wastewater of laboratory model WSP. 110
2.3.3 Percent reductions in BOD and Phosphate recorded in the wastewater of laboratory model WSP. 111
2.3.4 Helminthes found in the samples of laboratory model WSP. 112
2.3.5 Percent reduction in helminth eggs in laboratory model WSP. 113
3.1.1 Characteristics of raw waste used for laboratory WSP model ponds treated with mercury on zero day. 129
3.1.2 Physico-chemical characteristics of the wastewater of laboratory model WSP ponds treated with mercury. 130
3.1.3 Percent reduction in BOD and phosphate of laboratory model waste stabilization ponds treated with mercury. 131
3.1.4 Density and diversity of plankton observed in laboratory model WSP treated with mercury. 132
3.2.1 Characteristics of raw waste used for laboratory model WSP ponds treated with cadmium on zero day. 148
3.2.2 Physico-chemical characteristics of the wastewater of laboratory model WSP ponds treated with cadmium. 149
3.2.3 Percent reductions in BOD and Phosphate levels in the laboratory model Waste stabilization ponds treated with cadmium. 150
3.2.4 Density and diversity of plankton observed in laboratory model WSP treated with cadmium. 151
3.3.1 Characteristics of raw waste used for laboratory model WSP ponds treated with combination of mercury and cadmium (1:1) on zero day. 165
3.3.2 Physico-chemical characteristics of the wastewater of laboratory model WSP ponds treated with combination of mercury and cadmium (1:1). 166
3.3.3 Percent reduction in BOD and phosphate of laboratory model waste
stabilization ponds treated with combination of mercury and cadmium (1:1).

3.3.4 Density and diversity of plankton observed in laboratory model WSP treated with combination of mercury and cadmium (1:1) ratio.
