LIST OF FIGURES

2.1.1 Monthly variations in pH levels of raw, settled and final effluents. 67
2.1.2 Monthly variations in DO levels of raw, settled and final effluents. 67
2.1.3 Monthly variations in BOD levels of raw, settled and final effluents. 68
2.1.4 Monthly variations in Free CO₂ levels of raw, settled and final effluents. 68
2.1.5 Monthly variations in Alkalinity levels of raw, settled and final effluents. 69
2.1.6 Monthly variations in Total hardness levels of raw, settled and final effluents. 69
2.1.7 Monthly variations in Sulfate levels of raw, settled and final effluents. 70
2.1.8 Monthly variations in Phosphate levels of raw, settled and final effluents. 70
2.1.9 Monthly variations in Catalase activity of raw, settled and final effluents. 71
2.1.10 Monthly variations in Phospahtase activity of raw, settled and final effluents. 71
2.1.11 Monthly variations in Protease activity of raw, settled and final effluents. 72
2.1.12 Monthly variations in Urease activity of raw, settled and final effluents. 72
2.1.13 Monthly variations in SPC levels of raw, settled and final effluents. 73
2.1.14 Percent reductions in BOD and Phosphate of field WSP (Feb 2002- Jan 2003). 73
2.1.15 Density and diversity of zooplankton of field model WSP during Feb 2002- Jan 2003. 74
2.1.16 Density and diversity of phytoplankton of field model WSP during Feb 2002- Jan 2003. 74
2.2.1 Monthly variations in total *Ascaris lumbricoides* eggs in the wastewater during Feb 2002- Jan 2003 (Field WSP). 97

2.2.2 Monthly variations in total *Hymenolepis diminuta* eggs in the wastewater during Feb 2002- Jan 2003 (Field WSP). 97

2.2.3 Monthly variations in total *Hymenolepis nana* eggs in the wastewater during Feb 2002- Jan 2003 (Field WSP). 98

2.2.4 Monthly variations in total *Enterobius vermicularis* eggs in the wastewater during Feb 2002- Jan 2003 (Field WSP). 98

2.2.5 Percent reduction in the number of eggs of *Ascaris lumbricoides* 99

2.2.6 Percent reduction in the number of eggs of *Hymenolepis diminuta* 99

2.2.7 Percent reduction in the number of eggs of *Hymenolepis nana* 100

2.2.8 Percent reduction in the number of eggs of *Enterobius vermicularis* 100

2.3.1 Physico-chemical characteristics of raw wastewater on zero day in laboratory model WSP. 114

2.3.2 pH levels of batch and continuous flow system in the wastewater of laboratory model WSP ponds. 114

2.3.3 DO levels of batch and continuous flow system in the wastewater of laboratory model WSP ponds. 115

2.3.4 BOD levels of batch and continuous flow system in the wastewater of laboratory model WSP ponds. 115

2.3.5 Alkalinity levels of batch and continuous flow system in the wastewater of laboratory model WSP ponds. 116

2.3.6 Phosphate levels of batch and continuous flow system in the wastewater of laboratory model WSP ponds. 116

2.3.7 Catalase levels of batch and continuous flow system in the wastewater of laboratory model WSP ponds. 117

2.3.8 Urease levels of batch and continuous flow system in the wastewater of laboratory model WSP ponds. 117

2.3.9 SPC levels of batch and continuous flow system in the wastewater of
laboratory model WSP ponds.

2.3.10 Percent reduction in BOD in the wastewater of laboratory model WSP Ponds.

2.3.11 Percent reduction in Phosphate levels in the wastewater of laboratory model WSP ponds.

2.3.12 Percent reduction of in the number of eggs of *Ascaris lumbricoides* in laboratory model WSP.

2.3.13 Percent reduction of in the number of eggs of *Hymenolepis nana* in laboratory model WSP.

2.3.14 Percent reduction of in the number of eggs of *Hymenolepis diminuta* in laboratory model WSP.

2.3.15 Percent reduction of in the number of eggs of *Enterobius vermicularis* in laboratory model WSP.

3.1.1 Effect of mercury on pH levels in wastewater of laboratory model ponds.

3.1.2 Effect of mercury on DO levels in wastewater of laboratory model ponds.

3.1.3 Effect of mercury on BOD levels in wastewater of laboratory model ponds.

3.1.4 Effect of mercury on Alkalinity levels in wastewater of laboratory model Ponds.

3.1.5 Effect of mercury on Phosphate levels in wastewater of laboratory model Ponds.

3.1.6 Effect of mercury on Catalase levels in wastewater of laboratory model Ponds.

3.1.7 Effect of mercury on Urease levels in wastewater of laboratory model ponds.

3.1.8 Effect of mercury on SPC levels in wastewater of laboratory model ponds.
3.1.9 Percent reduction in BOD in mercury treated wastewater of laboratory model ponds. 138
3.1.10 Percent reduction in phosphate in mercury treated wastewater of laboratory model ponds. 138
3.2.1 Effect of cadmium on pH levels in wastewater of laboratory model ponds. 153
3.2.2 Effect of cadmium on DO levels in wastewater of laboratory model ponds. 153
3.2.3 Effect of cadmium on BOD levels in wastewater of laboratory model ponds. 154
3.2.4 Effect of cadmium on Alkalinity levels in wastewater of laboratory model ponds. 154
3.2.5 Effect of cadmium on Phosphate levels in wastewater of laboratory model ponds. 155
3.2.6 Effect of cadmium on Catalase levels in wastewater of laboratory model ponds. 155
3.2.7 Effect of cadmium on Urease levels in wastewater of laboratory model ponds. 156
3.2.8 Effect of cadmium on SPC levels in wastewater of laboratory model ponds. 156
3.2.9 Percent reduction in BOD in cadmium treated wastewater of laboratory model WSP. 157
3.2.10 Percent reduction in phosphate in cadmium treated wastewater of laboratory model WSP. 157
3.3.1 Effect of combination of mercury and cadmium (1:1) on pH levels in wastewater of laboratory model ponds. 171
3.3.2 Effect of combination of mercury and cadmium (1:1) on DO levels in wastewater of laboratory model ponds. 171
3.3.3 Effect of combination of mercury and cadmium (1:1) on BOD levels in
wastewater of laboratory model ponds. 172

3.3.4 Effect of combination of mercury and cadmium (1:1) on Alkalinity levels in wastewater of laboratory model ponds. 172

3.3.5 Effect of combination of mercury and cadmium (1:1) on Phosphate levels in wastewater of laboratory model ponds. 173

3.3.6 Effect of combination of mercury and cadmium (1:1) on Catalase levels in wastewater of laboratory model ponds. 173

3.3.7 Effect of combination of mercury and cadmium (1:1) on Urease levels in wastewater of laboratory model ponds. 174

3.3.8 Effect of combination of mercury and cadmium (1:1) on SPC levels in wastewater of laboratory model ponds. 174

3.3.9 Percent reduction in BOD in combination of mercury and cadmium (1:1) treated wastewater of laboratory model WSP. 175

3.3.10 Percent reduction in phosphate in combination of mercury and cadmium (1:1) treated wastewater of laboratory model WSP. 175
