ACKNOWLEDGEMENTS

One of the pleasures of concluding this task is the opportunity it gives me of acknowledging obligation and offering gratitude to those who have helped me during the course of the investigations.

To start with, I tender my deep sense of gratitude and indebtedness to my supervisors, Dr. Meenakshi Goyal, Reader and Dr. R.C. Bansal, Professor, Department of Chemical Engineering and Technology, Panjab University, Chandigarh for their able guidance and unmitigated encouragement, for having shown enough confidence in me to tackle problems of varied nature and for being a great source of inspiration. It would have been entirely impossible for me to achieve this goal without their support and care.

I am grateful to the Chairman, Department of Chemical Engineering and Technology, Panjab University, Chandigarh and The Director, Punjab Engineering College, Chandigarh for providing me with all the basic laboratory facilities required for carrying out the research work in a smooth manner.

I also express thanks to my colleagues, Dr. Harminder Kaur, Dr. Sarla Kumari, Dr. Prem Lata and to my laboratory coworkers, Ms. Rashmi Dhawan and Ms. Mamta Bhagat in Punjab Engineering College, Chandigarh and the Department of Chemical Engineering and Technology, Panjab University, Chandigarh for their cooperation and day to day help during the research work.

My heart – felt gratitude to my husband Mr. Piara Singh Dhillon for his encouragement and unfailing support. Profound thanks to my children Padmavathy Dhillon and Shivram Dhillon for their affection, cooperation and great perseverance during the course of my work.

Last, but not the least, I thank the Almighty for the immeasurable blessing showered on me for the successful completion of my thesis.

(R. AMUTHA)
