4.16 Analysis of variance (ANOVA) for response surface quadratic model (equation 4.1)
4.17 Predicted vs experimental values for maximum xylanase production
4.18 Effect of different nitrogen source on xylanase production by \textit{P. citrinum} in SSF
4.19 Effect of different pH, temperature, agitation, aeration, dissolved oxygen, and substrate concentration on cell mass, xylanase activity, extracellular protein content, specific activity, productivity
4.20 Effect of agitation and aeration on oxygen transfer coefficient (K\textsubscript{La})
4.21 Range of values of coefficients of equations (3.5) to (3.8).
4.22 Summary of various steps involved in the purification of xylanase for the crude extract
4.23 Effect of additives on xylanase activity
4.24 Coefficients of Power law model (equation 3.12 and 3.13)
4.25 Coefficients of weak gel model (equation 3.14) for control and xylanase-supplemented whole wheat dough samples
4.26 Coefficients for Peleg model for control and xylanase-supplemented whole wheat dough samples
4.27 Coefficients for Burger model for control and xylanase-supplemented whole wheat dough samples
4.28 Coefficients for Kelvin model for control and xylanase-supplemented whole wheat dough samples
4.29 Extensibility and stickiness properties of control and xylanase-supplemented dough
4.30 Vibrational mode of FTIR spectra of wheat flour dough
4.31 Effect of xylanase supplementation on crumb color of fresh and stored bread
4.32 Effect of xylanase supplementation on crust color of fresh and stored bread
4.33 Textural properties of bread
