4.4 Controlling Both Types of Errors................................. 122
Chapter 5 A Multiple Three-Decision Procedure: 128-147
Exponential Case
5.1 Introduction................................................................. 128
5.2 Procedure for the Location Case................................. 133
5.3 Computation of Critical Constants............................... 134
5.4 Validity of Critical Constants....................................... 142
5.4 Procedure for the Scale Case......................................... 143
5.4.1 Application to Normal Probability Model.................... 147
Chapter 6 A One Sided Test Based on Sample Quasi 148-170
Ranges
6.1 Introduction................................................................. 148
6.2 Proposed Procedure and Computation of the Critical
    Constants..................................................................... 151
6.2.1 Application to Exponential Family........................... 157
6.2.2 Application to Uniform Family............................... 161
6.3 Three-Decision Procedure........................................... 165
6.4 Simulated Power Comparison................................. 168
References........................................................................... 171-182
