ACKNOWLEDGMENTS

One of the greatest philosophers, logicians and thinkers of sixteenth century E.G.W. Leibniz remarked that the philosophy and success of a scientific probe revolve around the potentiality of a person who is capable of thinking accurately, clearly, coherently and systematically. After working under the apt guidance of Dr. I.S. Dua, Reader in the Department of Botany, Panjab University, Chandigarh, I am thoroughly convinced that he possessed all the traits mentioned above. He accomplished the assignment of guiding the present plan of research and experiments dexterously and conscientiously. His critical analysis and composition, along with clear cut concepts, total involvement and enduring emboldenment, concretised and precipitated the subject matter into this thesis. I owe to him a deep sense of gratitude for the irredeemable debt I feel I am under.

I express my heartfelt gratefulness to Dr. S.K. Sharma, Scientist, Central Soil Salinity Research Institute, Kamal, for his valuable suggestions and constructive criticism throughout the course of the present investigations.

The laboratory facilities, provided by Prof. S.S. Kumar and Prof. C.L. Mandhar, the former and the present Chairmen respectively, of the Department of Botany, Panjab University, Chandigarh, are highly acknowledged. I am deeply indebted to all the faculty members of this
Department for their academic support rendered from time to time.

I greatly acknowledge the help rendered by the Department of Plant Physiology, P.A.U. Ludhiana and The Division of Microbiology, I.A.R.I., New Delhi for providing the research materials as well as the comprehensive analytical work.

While appreciating the support given to me by all my friends, I thank Mrs. Leena, Miss Nidhi and especially Mr. Bhupinder Singh, Research Scholars of my laboratory, for their untiring co-operation and constructive contributions during the finalisation of the present dissertation.

I will always owe an immense gratitude and indebtedness to my father, Late Prof (Dr) O.P. Garg, who enlightened in my mind a sort of undying and insatiable love for the unknowns in the field of biology. Fortunately, the spirit has been sustained by an unstinted support, which has been forthcoming perpetually, from my mother Mrs. Nirmal Garg and brother Rajiv. It is this force which, somehow, has pushed me to complete the present piece of investigations.

I wish to express my gratitude to the innumerable scientists working in the field of nitrogen metabolism who have helped me to colour the mosaic of the present compendium with the tiles of their knowledge, expertise and memories.

At the end, I would personally like to thank Messrs Ravi Kumar Sharma and R.B. Yadav, typists of M/S Documents Copying Centre, Sector 17C, Chandigarh and its proprietor Mr. R.K. Ghai, for typing and the adjunctant secretarial help.

( NEERA GARG )
