Acknowledgement

The culmination of a thesis does not only involve research, analysis, studying and writing, but is as much a personal exploration and learning process. A process which is impossible to bring to an end without the expertise, assistance and friendship of many. In these few paragraphs I would like to express my sincere gratitude towards all those people who have been significant to me during the realization of this thesis.

For having accepted me in her elite group four years ago, for being always there to give advice about the research line to follow, for creating such a pleasant atmosphere in our workplace, for giving to all of her collaborators the freedom and motivation necessary to develop their skills, my sincere thanks goes to my supervisor: Prof. Manjit Kaur. I am grateful to her for giving me an opportunity to be part of the PUHEP and of the community at CERN. I also express my sincere gratitude for her care and undaunted support that kept me highly motivated during my pregnancy in the last few months of my research.

An experiment as complicated as CMS, cannot be successfully executed without the dedicated and knowledgeable work of many people. I wish to thank the members of the CMS Collaboration, who contributed to this analysis in manifold ways, for their hospitality and giving me a fantastic opportunity of researching in an international community.

It is my great pleasure to acknowledge the assistance and help of Prof. Klaus Rabbertz, due to whose outstanding commitment especially in the field of QCD related physics, I could attain so much knowledge in the subject. It was a great experience working with him. He always kindly answered all sorts of questions and remained calm in every situation. His enthusiasm, simplicity and commitment to science deeply impressed me.

Further I owe debt of thanks to Prof. Nikos Varelas, Dr. Kostas Kaousoulos, Dr. Ferenc Sikler and Dr. Leonard Apanasevich not only for their constructive criticism in every step of my analysis but also for their fruitful discussions which contributed a lot to my analysis.

I wish to thank Dr. Andreas Oheler, who was always willing to help and gave his best suggestions. He assisted me to learn about the analysis environment, programming languages and many more things which were essential to complete this thesis.
Many thanks go in particular to Prof. J. M. Kohli, Prof. J. B. Singh, Prof. Suman Beri and Dr. V. Bhatnagar for their continuous support and efforts to provide us with adequate facility in PUHEP lab. I would also like to thank INDIA-CMS collaboration for providing us platform to discuss our work by arranging regular collaboration meetings.

I am thankful to the Chairperson, Department of Physics, Panjab University for providing me with adequate facilities to work in the department. The research work has been supported by various organizations including University Grants Commission (UGC) and Department of Science and Technology (DST). I am thankful to all of them for their confidence in me.

I am grateful to my husband and best friend Maj. Neeraj Tuli, who was always there to help, support, encourage and motivate me throughout my research work and my life. He forms the backbone and the origin of my happiness. His love and support without any complaint or regret has enabled me to complete this Ph.D. project. I am thankful to GOD for blessing me with a friend and husband like him.

I thank GOD for blessing me with my adorable son, Shreyansh. Shreyansh has always given me joy and happiness in testing time while I was in the final stages of my research. He will always have special space in my heart as I submit my thesis.

I would like to thank all my friends in PUHEP lab, Dr. Harinder Singh Bawa, Dr. Sunil Bansal, Dr. Supreet Pal Singh, Dr. Anil Partap Singh, Inderpal Singh, Prabhdeep Kaur, Archana Sharma, Rita Aggarwal, Monika Jindal, Nisha Naib, Jyoti Joshi, Ruchi Gupta, Nitish Dhingra, Monika Mittal, Lovedeep Kaur, Saneel Dutt, Richa Sharma, Sonam Mahajan, Kuldeep, Raman, Kanishka, Bhawan, Anter who were always there for helping me out from all kinds of problems with their suggestions and discussions and creating enjoyable environment in the lab.

I am heartily thankful to Sudha, Shlipi, Shandya, Arun, Shivali for sharing their valuable experiences with me. I will never forget the tea parties at the weekends in hostel kitchen, during our stay in Geneva, CERN.

I would like to thank Mr. Baljinder Singh, Mr. V. K. Bhandari for their guidance and support in the hardware lab. I am grateful to the members of the purchase section in the department who were always there to help me in the official works.

I owe deepest gratitude to my family for their unconditional love,
understanding, encouragement, blessings and support throughout my life. This dissertation is simply impossible without them. I am indebted to my father Mr. Ravinder Mehta, who never complained in spite of all the hardships in his life he had to face to support me in my endeavor. I am especially grateful to my mother Mrs Prem Mehta, who was always there whenever I needed her love. I am still her little daughter, and will need her support every time for my future accomplishments. A gratitude also goes to my father in law, Maj B.M. Tuli and mother in law Mrs Kamal Tuli for their help and support in difficult moments. I am grateful to them for their understanding and love encouraged me to continue pursuing Ph.D project even after marriage. I am thankful to my brother Mr. Nikhil Ambish Mehta for his love, support and his suggestion who has always helped me a lot to fight with any difficult situation which I had to face in my life.

Last but not the least, my greatest regards to the Almighty God for bestowing upon me the courage to face the complexities of life and complete this project successfully.

Finally, I would like to thank everybody who was important to the successful realization of this thesis, as well as express my apology that I could not mention everybody personally one by one who contributed in my endeavour to complete the thesis.
