Figure 4.11 (a) Variation of tool wear with depth of cut for AISI 4340 steel and H13 steel at a constant cutting time of 4 min cutting speed of 140 m/min and feed rate of 0.14 mm/rev with multilayer coated carbide tool

Figure 4.11 (b) Variation of tool wear with depth of cut for AISI 4340 steel and H13 steel at a constant cutting time of 4 min cutting speed of 140 m/min and feed rate of 0.14 mm/rev with mixed ceramic and (c) coated ceramic tools.
Figure 4.12  (a) Variation of tool wear with cutting time at constant cutting speed of 140 m/min, feed rate of 0.14 mm/rev and depth of cut of 0.6 mm with multilayer coated carbide and (b) mixed Ceramic tool

Figure 4.12  (c) Variation of tool wear with cutting time for various cutting tools and materials for a constant cutting speed of 140 m/min, feed rate of 0.14 mm/rev and depth of cut of 0.6 mm with coated ceramic tool

Figure 4.13  Micrographic images of worn cutting edges of coated carbide tool during turning of H13 steel at \( V_c = 140 \text{ m/min}, f = 0.14 \text{ mm/rev}, d = 0.6 \text{ mm} \) and cutting time of (a) \( t = 2 \text{ min} \) and (b) \( t = 8 \text{ min} \).

Figure 4.14  SEM views of wear effect observed on multilayer coated carbide tool at (a) \( V_c = 140 \text{ m/min}, f = 0.14 \text{ mm/rev}, d = 0.6 \text{ mm} \) and \( t = 8 \text{ min} \). (b) \( V_c = 260 \text{ m/min}, f = 0.1 \text{ mm/rev}, d = 0.6 \text{ mm} \) and \( t = 8 \text{ min} \).

Figure 4.15  EDAX pattern of the worn-out coated carbide tool (magnification 500x and 20.0 kV) at \( V_c = 260 \text{ m/min}, f = 0.10 \text{ mm/rev and } d = 0.6 \text{ mm} \)

Figure 4.16  Examples of tool worn appearance on the multilayer coated carbides during (a) turning of H13 steel at \( V_c = 260 \text{ m/min}, f = 0.1 \text{ mm/rev}, d = 0.6 \text{ mm} \) and \( t = 4 \text{ min} \), (b) magnification of site A in (a), (c) turning of AISI 4340 steel at \( V_c = 260 \text{ m/min}, f = 0.26 \text{ mm/rev}, d = 0.6 \text{ mm} \) and \( t = 8 \text{ min} \), (d) magnification of site A in (c).

Figure 4.17  Micrographic images of worn cutting edges of mixed ceramic tool during turning of hardened AISI H13 steel at different cutting conditions.

Figure 4.18  EDAX pattern of the worn-out tool (magnification 500x and 20.0 kV) at \( V_c = 140 \text{ m/min}, f = 0.14 \text{ mm/rev and } d = 0.6 \text{ mm} \)
Figure 4.19 Micrographic images of worn cutting edges of mixed ceramic tool during turning of hardened AISI4340 steels at $V_c=260$ m/min, $f=0.26$ mm/rev, $d=0.6$ mm and $t=8$ min.

Figure 4.20 Micrographic images of worn cutting edges of coated ceramic tool during turning of AISI 4340 steel and H13 steel at different cutting conditions.

Figure 4.21 Chip formation during hard turning of AISI 4340 steel at different cutting conditions.

Figure 4.22 Chip formation during hard turning of AISI H13 steel at different cutting conditions.

Figure 4.23 Photomicrographs showing chip formation and deformation zone depending on the conditions for hardened steels (30x).

Figure 4.24 (a) Effect of cutting speed on chip thickness variations produced during turning of hardened AISI 4340 and H13 steels.

Figure 4.24 (b) Effect of feed rate and (c) depth of cut on chip thickness variations produced during turning of hardened AISI 4340 and H13 steels.

Figure 5.1 (a) Variation of surface roughness with cutting speed for the turning of hardened AISI 4340 steel and H13 steel at a constant cutting time of 4 min, feed rate of 0.14 mm/rev and depth of cut of 0.6 mm with multilayer coated carbide tool and (b) mixed ceramic tool.

Figure 5.1 (c) Variation of surface roughness with cutting speed for the turning of hardened AISI 4340 steel and H13 steel at a constant cutting time of 4 min, feed rate of 0.14 mm/rev and depth of cut of 0.6 mm with coated ceramic tool.

Figure 5.2 (a) Variation of surface roughness with feed rate for the turning of hardened AISI 4340 steel and H13 steel at a constant cutting time of 4 min, cutting speed of 140 m/min and depth of cut of 0.6 mm with multilayer coated carbide tool.
(b) Variation of surface roughness with feed rate for the turning of AISI 4340 steel and H13 steel at a constant cutting time of 4 min, cutting speed of 140m/min and depth of cut of 0.6mm with mixed ceramic and (c) coated ceramic tools.

(a) Variation of surface roughness with depth of cut for the turning of AISI 4340 steel and H13 steel at a constant \( t = 4 \) min, \( V_c = 140 \) m/min and \( f = 0.14 \) mm/rev with coated carbide and (b) mixed ceramic tool.

(c) Variation of surface roughness with depth of cut for the turning of AISI 4340 steel and H13 steel at a constant cutting time of 4 min, cutting speed of 140m/min and feed rate of 0.14mm/rev with coated ceramic tool.

Variation of surface roughness with cutting time for the turning of AISI 4340 steel and H13 steel at a constant cutting time of 4 min cutting speed of 140m/min and feed rate of 0.14mm/rev with multilayer coated carbide, ceramic and coated ceramic tools.

SEM images showing the material side flow on the machined surface during turning of AISI 4340 steel with coated carbide tool at \( V_c = 200 \) m/min, \( f = 0.10 \) mm/rev, \( d = 0.8 \) mm and \( t = 2 \) min and 8min.

Effect of tool wear on material side flow on the machined surface during turning of AISI H13 steel with mixed ceramic tool at constant \( V_c = 200 \) m/min, \( f = 0.1 \) mm/rev, \( d = 0.6 \) mm and \( t = 2 \) min and 8min.

SEM images of surfaces produced during turning of hardened AISI 4340 steel with coated carbide tool at \( V_c = 260 \) m/min, \( f = 0.1 \) mm, \( d = 1.0 \) mm and \( t = 4 \) min and 8min.

SEM images showing cavities in the machined surface during turning of hardened AISI 4340 steel with coated carbide tool at (a) \( V_c = 200 \) m/min, \( f = 0.26 \) mm/rev, \( d = 0.8 \) mm and \( t = 4 \) min, (b) \( V_c = 140 \) m/min, \( f = 0.18 \) mm/rev, \( d = 0.6 \) mm and \( t = 6 \) min.
Figure 5.9  SEM images show the microcracks in the machined surface during turning of hardened AISI 4340 steel with coated carbide tool at (a) lower magnification and (b) higher magnification.

Figure 5.10  SEM image of material side flow exist on the machined surface during turning of hardened AISI 4340 steel with ceramic tool at \( V_c=260\text{m/min}, f=0.1\text{mm/rev}, d=0.8\text{mm} \) and \( t=4\text{min} \).

Figure 5.11  Effect of tool wear on material side flow during turning of hardened AISI H13 steel with ceramic tool at \( V_c=260\text{m/min}, f=0.1\text{mm/rev}, d=0.3\text{mm} \) and \( t=6\text{min} \), (a) lower magnification (b) higher magnification.

Figure 5.12  Effect of tool wear on material side flow during turning of hardened AISI H13 steel with coated ceramic tool at \( V_c=260\text{m/min}, f=0.06\text{mm/rev} \) and \( d=0.3\text{mm} \) and \( t=8\text{min} \), (a) lower magnification (b) higher magnification.

Figure 5.13  Digital camera and SEM images of machined surface of hardened AISI 4340 steel using multilayer coated carbide tool at cutting conditions of cutting speed of 260m/min feed rate of 0.18 mm/rev, \( d=0.3\text{mm} \) and cutting time of 6min., (a) lower magnification (b) higher magnification.

Figure 5.14  Micrographic views of microstructural changes at a hard turned surface of AISI H13 steel using coated carbide tool at (a) \( V_c=140\text{m/min}, f=0.14\text{mm/rev} \) and \( d=0.6\text{mm} \) and (b) \( V_c=260\text{m/min}, f=0.1\text{mm/rev} \) and \( d=0.3\text{mm} \) and \( t=8\text{min} \).

Figure 5.15  Micrographic views of microstructural changes at a hard turned surface of AISI H13 steel using mixed ceramic tool at (a) \( V_c=200\text{m/min}, f=0.14\text{mm/rev} \) and \( d=0.6\text{mm} \) and \( t=4\text{min} \), (b) \( V_c=260\text{m/min}, f=0.14\text{mm/rev} \) and \( d=0.3\text{mm} \) and \( t=8\text{min} \).

Figure 5.16  Schematic illustration of the residual stresses levels (penetration depth (a), beneficial depth (b) and maximum compressive residual stress (c)) (Hua et al., 2006).
Figure 5.17 Effect of cutting speed on residual stresses distribution during turning of hardened AISI 4340 and H13 steels at constant feed rate of 0.14mm/rev, depth of cut of 0.6 mm and cutting time of 4min.

Figure 5.18 Effect of feed rate on residual stresses distribution during turning of hardened AISI 4340 and H13 steels at constant cutting speed of 140 m/min, depth of cut of 0.6 mm and cutting time of 4min.

Figure 5.19 Effect of depth of cut on residual stresses distribution during turning of AISI 4340 and H13 steels at constant \( V_c = 140 \) m/min, \( f = 0.14 \) mm/rev and \( t = 4 \) min.

Figure 5.20 Effect of cutting time on surface residual stresses during turning of AISI 4340 steel and H13 steel with different cutting tools at constant \( V_c = 140 \) m/min, \( f = 0.14 \) mm/rev and \( d = 0.6 \) mm.
