Acknowledgements i

1 Introduction 1

2 Rings With Multiplicative Sets of Primitive Idempotents 11
  2.1 Introduction ............................................................. 11
  2.2 Finite direct products of connected rings ...................... 12
  2.3 Arbitrary rings \( R \) with multiplicative \( P(R) \) .......... 15
  2.4 Regular rings .......................................................... 17

3 Some Characterizations of VNL Rings 23
  3.1 Introduction ...................................................................................................23
  3.2 Examples and basic properties of VNL rings ......................... 25
  3.3 Formal triangular matrix rings that are VNL ................. 29
  3.4 Characterizations of abelian VNL rings .......................... 37
  3.5 Characterization of semiperfect VNL rings ..................... 39
  3.6 A Sufficient Condition .................................................. 54

4 Rings Generated By Units 57
  4.1 Introduction ................................................................. 57
  4.2 Some important conditions in the theory of rings generated by units . 59
  4.3 Unit-regular rings with unit sum number 2 ..................... 63
