ACKNOWLEDGEMENTS

The present study owe a great deal to Dr. Mohammad Khalid who guided the research, taking a keen and lively interest in the subject and offering constructive criticism at every stage of writing.

The large number of libraries that enabled and enriched the completion of this work, apart from Panjab university, are following: Jawaharlal Nehru University, Nehru Memorial Museum and Library, Institute of Defence Studies and Analysis, Indian Council of World Affairs, the United Nations Information Centre, the American Centre, the British Council. The staff and the personal at these places were most helpful and cooperative. I owe a deep gratitude to them.

The Department of Political Science, Panjab University has helped me shaping my ideas regarding present thesis and interaction with researchers in the department has benefited me in many ways.

My visit to Nepal in the month of June 2000 was quite useful to understand the river systems of Nepal. I should not forget to thank the scores of unknown people, fellow travellers and guides at different spots in Nepal who provided me certain facts which otherwise one does not usually come across. I greatly acknowledge the help provided by Mr. Satbir there.

I am personally beholden to Senior Executive Engineer Jagdeep Kharbanda, who has been closely associated with Chukha and Tala Hydroelectric Projects of Bhutan, for providing me primary information about these projects. The discussions with him about the lay out, importance and relevance of these projects has proved a valuable input for the thesis.

I am thankful to Major A.P.S. Sandhu for providing me the opportunity to show the different moods of descending Satluj and many sub tributaries in Upper Himalayas and providing me the facilities.

I gratefully acknowledge unfailing support and encouragement provided by Prof. Harkuldip Singh and Mrs. Satwant Kaur, Lecturer.

Gratitude must be expressed to Er. Anil Dhawan, for giving precious suggestions for use of computer in research related matters throughout the thesis.

Finally, I would like to thank my wife Dr. Manjit and sons Angad and Arjun for their love and encouragement without which I could not have completed the present work.

(Dilbagh Singh)
