</table>
4.7 Descriptive analysis and frequency distribution of scores on measure of Negative Cognition as derived from the Automatic Thought Questionnaire (Hollon & Kendell, 1980) for the Low Social Support & High Social Support (satisfaction from available support: qualitative) groups

4.8 Descriptive analysis and frequency distribution of scores on measure of Stress as derived from the Perceived Stress Scale (PSS-10; Cohen & Williamson, 1988) for the Low Social Support & High Social Support (satisfaction from available support: qualitative) groups

4.9 Descriptive analysis and frequency distributions for all the tested variables

4.10 Showing the comparison between Male and Female adolescents

4.11 Showing the comparison between groups with high and low scores on Depression

4.12 Showing the comparison between groups with high and low scores on Social Support (satisfaction with available support: qualitative)

4.13 Showing the comparison between groups with high and low scores on Social Support (perceived availability of number of supportive persons: Quantitative)

4.14 Summary of two way (2 x 2) analysis of variance for the Low Social Support (satisfaction with available support: qualitative) group

4.15 Summary of two way (2 x 2) analysis of variance for the Low Social Support (satisfaction with available support: qualitative) group

4.16 Summary of two way (2 x 2) analysis of variance for the Low Social Support (satisfaction with available support: qualitative) group

4.17 Summary of two way (2 x 2) analysis of variance for the High Social Support (satisfaction with available support: qualitative) group

4.18 Summary of two way (2 x 2) analysis of variance for the High Social Support (satisfaction with available support: qualitative)
4.19 Summary of two way (2 x 2) analysis of variance for the High Social Support (satisfaction with available support: qualitative) group

4.20 Summary of two way (2 x 2) analysis of variance for the Low Social Support (perceived availability of number of supportive persons: quantitative) group

4.21 Summary of two way (2 x 2) analysis of variance for the Low Social Support (perceived availability of number of supportive persons: quantitative) group

4.22 Summary of two way (2 x 2) analysis of variance for the Low Social Support (perceived availability of number of supportive persons: quantitative) group

4.23 Summary of two way (2 x 2) analysis of variance for the High Social Support (perceived availability of number of supportive persons: quantitative) group

4.24 Mean scores on Depression as derived from Zung’s Self-Rating Depression Scale in relation to Gender and Stress in the High Social Support (perceived availability of number of supportive persons: quantitative) group

4.25 Summary of two way (2 x 2) analysis of variance for the High Social Support (perceived availability of number of supportive persons: quantitative) group

4.26 Mean scores on Depression as derived from Zung’s Self-Rating Depression Scale in relation to Gender and Negative Cognition in the High Social Support (perceived availability of number of supportive persons: quantitative) group

4.27 Summary of two way (2 x 2) analysis of variance for the High Social Support (perceived availability of number of supportive persons: quantitative) group

4.28 Summary of three way (2 x 2 x 2) analysis of variance for the Low Social Support (satisfaction with available support: Qualitative) group

4.29 Mean scores on Depression as derived from Zung’s Self-Rating Depression Scale in relation to Negative Cognition and Stress in the Low Social Support (satisfaction with available support:
4.30 Summary of three way (2 x 2 x 2) analysis of variance for the High Social Support (satisfaction with available support: Qualitative) group

4.31 Mean scores on Depression as derived from Zung’s Self-Rating Depression Scale in relation to Negative Cognition and Stress in the High Social Support (satisfaction with available support: Qualitative) group

4.32 Mean scores on Depression as derived from Zung’s Self-Rating Depression Scale in relation to the interaction effects between Stress, Negative Cognition and Gender in the High Social Support (satisfaction with available support: Qualitative) group

4.33 Showing the mean difference values (Mean scores on Depression as derived from the Zung’s Self-Rating Depression Scale) of the different groups in relation to the significant interaction effects between Stress, Negative Cognition and Gender in the High Social Support (Satisfaction with available support: Qualitative) group

4.34 Summary of three way (2 x 2 x 2) analysis of variance for the Low Social Support (perceived availability of number of supportive persons: quantitative) group

4.35 Mean scores on Depression as derived from Zung’s Self-Rating Depression Scale in relation to Negative Cognition and Stress in the Low Social Support (perceived availability of number of supportive persons: quantitative) group

4.36 Summary of three way (2 x 2 x 2) analysis of variance for the High Social Support (perceived availability of number of supportive persons: quantitative) group

4.37 Mean scores on Depression as derived from Zung’s Self-Rating Depression Scale in relation to Negative Cognition and Stress in the High Social Support (perceived availability of number of supportive persons: quantitative) group

4.38 Mean scores on Depression as derived from Zung’s Self-Rating Depression Scale in relation to Gender in the High Social Support (perceived availability of number of supportive persons: quantitative) group
quantitative) group

4.39 Mean scores on Depression as derived from Zung's Self-Rating Depression Scale in relation to Gender and Stress in the High Social Support (perceived availability of number of supportive persons: quantitative) group

4.40 Mean scores on Depression as derived from Zung's Self-Rating Depression Scale in relation to the interaction effects between Stress, Negative Cognition and Gender in High Social Support (perceived availability of number of supportive persons: quantitative) group

4.41 Showing the mean difference values (Mean scores on Depression as derived from Zung's Self-Rating Depression Scale) of the different groups in relation to the significant interaction effects between Stress, Negative Cognition and Gender in the High Social Support (perceived availability of number of supportive persons: quantitative) group
