Acknowledgements

It is my great privilege to record my indebtedness to my teacher Professor P.N. Mehra who infused in me the spirit of work research and under whose guidance the present thesis is completed. I am grateful to him for his keen interest, criticism and valuable suggestions. I also express my gratitude to Dr. R.E. Holttum for his active interest in my work and the help in the critique of taxonomic problems, which have been rather vital to the present thesis.

I feel deeply indebted to several workers engaged in fern study for their generous help. Especially for the loan of some specimens or for providing fixed research material of species included in the thesis, I am thankful to Dr. W.A. Sledge (England), Dr. Siro Kurita (Japan), Mr. C.V. Morton (U.S.A.), Miss Mary D. Tindale (Australia), Dr. J.S. Lichtenstein (Argentina), Dr. J.E. Senaratna (Ceylon).

I gratefully acknowledge the assistance of Kew authorities, especially Dr. G. Taylor and Mr. F. Ballard, Prof. R.C. Ching, Late Mr. A.H.G. Alston, Dr. G. Panigrahi and Dr. S.K. Mukerji for identification of some of my specimens.
