1 Introduction 1

1.1 Elastic waves in an isotropic elastic medium 3

1.2 Importance of elastic waves 5

1.2.1 Waves in an anisotropic medium 6

1.2.2 Waves in heterogeneous medium 11

1.2.3 Waves in viscoelastic medium 15

1.2.4 Mathematical description of linear viscoelastic materials 22

1.2.5 Waves in initially stressed medium 26

1.3 Waves at a corrugated interface 30

1.4 Rayleigh’s method of approximation 36

1.5 Plan of thesis 37

2 Reflection and transmission of $SH$-waves at a corrugated interface between two laterally and vertically heterogeneous anisotropic elastic solid half-spaces 41

2.1 Introduction 41

2.2 Formulation of the problem and its solution 42

2.3 Boundary conditions 47

2.4 Solution of the first order approximation 51

2.5 Special case 56

2.5.1 Particular cases 57

2.6 Numerical results and discussion 61

3 Reflection and refraction of $SH$-waves at a corrugated interface between two monoclinic elastic half-spaces 75

3.1 Introduction 75

3.2 Formulation of the problem and its solution 76

3.3 Boundary conditions 81

3.4 Solution of the first order approximation 82

3.5 Energy relation 86

3.6 Special case 89

3.6.1 Particular cases 90

3.7 Numerical results and discussion 92
Reflection and refraction of $SH$-waves at a corrugated interface between two laterally and vertically heterogeneous viscoelastic solid half-spaces

4.1 Introduction .................................................. 103
4.2 Formulation of the problem and its solutions ........... 104
4.3 Boundary conditions .................................... 109
4.4 Solution of the first order approximation ................. 112
4.5 Special case ............................................. 114
4.5.1 Particular cases ...................................... 115
4.6 Numerical results and discussion .......................... 117

Shear waves at a corrugated interface between heterogeneous -anisotropic elastic half-space and heterogeneous viscoelastic solid half-space

5.1 Introduction ............................................. 129
5.2 Formulation of the problem and its equations ........... 130
5.3 Boundary conditions .................................... 134
5.4 Solution of the first order approximation ................. 135
5.5 Special case ............................................. 137
5.5.1 Particular cases ...................................... 138
5.6 Numerical results and discussion .......................... 140

$SH$-waves at a corrugated interface between a dry sandy half-space and an anisotropic elastic half-space

6.1 Introduction ............................................. 155
6.2 Formulation of the problem and its solution ........... 155
6.3 Boundary conditions .................................... 158
6.4 Solution of the first order approximation ................. 159
6.5 Solution of the second order approximation ............ 160
6.6 Special case ............................................. 161
6.6.1 Particular cases ...................................... 162
6.7 Energy partition equation ................................ 163
6.8 Numerical results and discussion .......................... 164

Reflection/Transmission of $SH$-waves at a corrugated interface between an initially stressed slow elastic half-space and an anisotropic elastic solid half-space

7.1 Introduction ............................................. 175
7.2 Formulation of the problem and its solution ........... 176
7.3 Boundary conditions .................................... 178
7.4 Solution of the first order approximation ................. 179
7.5 Special case ............................................. 181
7.5.1 Particular cases ...................................... 182
7.6 Energy partition equation ................................ 183
7.7 Numerical results and discussion .......................... 183

8 Conclusion .................................................. 193

References .................................................... 197
