

A C K N O W L E D G E M E N T S

In this esoteric enterprise, many persons extended me their invaluable help in a variety of ways. At this juncture, I feel obliged to acknowledge their generosity and thank them all.

I am grateful to Dr. D.P. Dubey, my supervisor, for giving me an opportunity to start the career - a research career in science, where the search for truth becomes its paradigm. In this endeavour, Prof. H.S. Hans, Head of the Department, helped me in many ways. I feel obliged to him for his inspiring appreciation of my work.

The final manuscript of this thesis was critically checked by Dr. T.K. Chatterjee and Prof. S.P. Puri, Physics Department, Panjab University, and Dr. T.N. Rengarajan and Dr. R.P. Varma, TIFR, Bombay. Perhaps I can not express my gratitude to them in words; I only feel it ! The painstaking job of correcting the typed script was done by Dr. C.G. Mahajan, Messers Praveer Asthana and V. Subramaniam. I thankfully acknowledge their help.

A timely help by Messers Dev Singh and Ajit Singh in the metal workshop, Mr. Jagdev Singh in the repair of electronic consoles, and Mr. Emerson in the glass-blowing jobs, went a long way in the completion of this work. I am thankful to them for their assistance. The secretarial staff of the department also deserves my thanks for procuring the necessary material in time.

In the initial stages of this work, many useful discussions were had with Mr. U.S. Kushwaha, Dr. V.S. Bhatia and Dr. J.Cleetus. I appreciate their cooperation.

My rather long stay in this department became a rich and memorable experience in the company of my friends Jai Dev Dasgupta,

(ii)

Ashwani Kumar, Jatinder Bajaj, Anil Khurana and Bindu Bambah. Life would have been considerably drab without their ever-pleasing company. A host of other friends, whom I possibly can not name here, deserve my thanks for being so nice to me.

I nostalgically recall my stay at TIFR, Bombay, from June to November, where a major portion of this thesis was completed. I extend my gratitude to the staff people of the Bubble Chamber section for providing me an opportunity to work there; to the technical and scanning staff for helping me at various stages. I can not forget the obligation of Mr. K. Sudhakar for helping me in the measurements and computation work. Dr. A.K.Kapoor helped me in the numerical computation. It was a pleasure to have lived and worked with him. I am indebted to Dr. V.S. Narsimhan and Dr. S.A. Stephens for helping me in understanding some of the intricacies of cosmic-rays data analysis. I am grateful to a large number of my friends in the Institute for making my sojourn so pleasant and memorable in an unfamiliar environment.

I am indebted to my parents and my brothers and sisters for putting up with me all these years. A silent and patient wait by Promila was a great inspiration in the final stages of this work. I owe a lot to her.

If this volume discerns any beauty, the credit goes to Mr. S.L. Verma for typing, Mr. S.C. Rawla for making the drawings and Mr. S.N. Sharma for cyclostyling.

Finally, the financial assistance from the Department of Atomic Energy, Govt. of India, is gratefully acknowledged.
