## 1 INTRODUCTION AND MOTIVATION

1.1 General Watermarking System

1.2 Motivation

1.3 Research Objectives

1.4 Summary of Contributions

1.5 Organization of Thesis

## 2 WATERMARKING SYSTEM: QUALITY EVALUATION CRITERIA AND STATE OF ART

2.1 Classification of Image Watermarking

2.1.1 Blind and Non-blind Image Watermarking

2.1.2 Spatial and Frequency Domain Image Watermarking

2.1.3 Visible and Invisible Image Watermarking

2.1.4 Source Based and Application Based Watermarking

2.2 Watermarking Quality Evaluation Criteria

2.2.1 Imperceptibility or Transparency

2.2.2 Robustness

2.2.3 Payload

2.2.4 Security
2.2.5 Complexity .................................................. 16
2.3 Mathematical Background and modelling .......................... 16
  2.3.1 Transforms ............................................... 16
    2.3.1.1 Discrete Wavelet Transform (DWT) .................. 16
    2.3.1.2 Discrete Cosine Transform (DCT) ................. 19
    2.3.1.3 Discrete Fourier Transform (DFT) ............... 20
    2.3.1.4 Singular Value Decomposition (SVD) ............. 21
    2.3.1.5 Fast Walsh Hadamard Transform (FWHT) ....... 22
  2.3.2 Multiobjective Evolutionary Optimizer (MEO) ............. 23
  2.3.3 Security Implementations ................................ 26
    2.3.3.1 Scrambling Methods ............................... 26
    2.3.3.2 Key Generations Logics ............................ 30
    2.3.3.3 Image Partition Merging Scheme (IPMS) .......... 31
    2.3.3.4 Randomization ..................................... 33
  2.3.4 Color Image Watermarking ................................ 34
    2.3.4.1 Need of Color Space Conversions .................. 34
    2.3.4.2 Color Transformations .............................. 35
    2.3.4.3 RGB Color Space ................................... 36
    2.3.4.4 RGB to KLA Color Transformation ................. 36
    2.3.4.5 RGB to YUV Color Transformation ................. 36
    2.3.4.6 RGB to YIQ Color Transformation .................. 37
    2.3.4.7 RGB to XYZ Color Transformation .................. 37
    2.3.4.8 RGB to UVW Color Transformation ................. 37
    2.3.4.9 RGB to YCgCb Color Transformation ............... 38
    2.3.4.10 RGB to RcGcBc Color Transformation ............. 38
    2.3.4.11 RGB to RsGsBs Color Transformation ............. 38
    2.3.4.12 RGB to LUV Color Transformation ................. 39
  2.3.5 Medical Image Handling Preserving ROI .................... 39
  2.3.6 Mathematical Model ...................................... 41
  2.4 Literature Review .......................................... 44
  2.5 Watermarking Challenges and Current Trends .................. 51

3 DESIGN ISSUES AND PROPOSED METHODOLOGY ................. 55
  3.1 Design Issues ................................................ 55
    3.1.1 Capacity Versus Robustness ............................ 55
    3.1.2 Distortion and Perceptual Quality .................... 56
    3.1.3 Uneven Distribution of Embedding Capacity .......... 56
    3.1.4 Spatial Versus Transform Domain ....................... 56
    3.1.5 Robustness Against Actual Attack Conditions ....... 57
    3.1.6 Human Visual System (HVS) ........................... 58
3.1.7 Conflict of Both Robustness and Imperceptibility under High Capacity

3.1.8 Time Complexity

3.2 Handling Image Watermarking Attacks

3.2.1 Pepper and Salt Noise Attack or Impulse Noise Attack

3.2.2 Poisson Noise Attack or Shot Photon Noise Attack

3.2.3 Speckle Noise Attack or Random Noise Attack

3.2.4 Gaussian Noise Addition and Gaussian Filtering Attacks

3.2.5 Mean Filtering Attack or Average Filtering Attack

3.2.6 Median Filtering and Wiener Filtering Attacks

3.2.7 Rotation, Scaling, Translation(RST) Attacks

3.2.8 Histogram Equalization and Contrast Adjustment Attacks

3.2.9 Gamma Correction Attack

3.2.10 Compression Attack

3.2.11 Sharpening and Blurring Attacks

3.2.12 Resizing and Cropping Attack

3.3 Proposed System Architecture

3.3.1 Watermark Embedding Process

3.3.2 Watermark Extraction Process

3.4 Insight into Proposed Techniques

3.4.1 Tech_Num_1: Modified LSB Insertion Based Technique

3.4.2 Tech_Num_2: DWT Based Image Watermarking

3.4.3 Tech_Num_3: Combine DWT-DCT Based Image Watermark Technique

3.4.4 Tech_Num_4: ROI Based Transform Domain Watermarking Technique for Medical Images

3.4.5 Tech_Num_5: Image Watermarking Based on DWT-DFT-SVD Domain

3.4.6 Tech_Num_6: DWT-FWHT-SVD Based Image Watermarking Robust to Noise Addition and Filtering Attacks

3.4.7 Tech_Num_7: Image Watermarking Using MEO

3.4.8 Tech_Num_8: Applying Image Watermarking to Real World Applications

3.4.8.1 Tech_Num_8.1 Biometric and Wavelet Based E-voting System

3.4.8.2 Tech_Num_8.2 Criminal Photograph Authentication System

4 SYSTEM DEVELOPMENT AND IMPLEMENTATIONS
4.1 Development Environment and Databases .................................. 77
4.2 Proposed Image Watermarking System ..................................... 78
   4.2.1 Implementation of Tech_Num_1: Modified LSB Insertion Based Technique ................................................. 78
      4.2.1.1 Watermark Embedding for Modified LSB Based Technique ................................................................. 79
      4.2.1.2 Watermark Extraction for Modified LSB Based Technique ............................................................. 80
   4.2.2 Implementation of Tech_Num_2: DWT Based Image Watermarking ................................................................. 81
      4.2.2.1 Watermark Embedding for DWT Based Image Watermarking ............................................................... 81
      4.2.2.2 Watermark Extraction for DWT Based Image Watermarking ......................................................... 82
   4.2.3 Implementation of Tech_Num_3: Combine DWT-DCT Based Watermarking Technique ............................................. 83
      4.2.3.1 Watermark embedding in combine DWT-DCT Domain .......................................................... 83
      4.2.3.2 Watermark Extraction in Combine DWT-DCT domain ......................................................... 85
   4.2.4 Implementation of Tech_Num_4: ROI Based Watermarking Technique for Medical Images ............................... 86
      4.2.4.1 Watermark Embedding in ROI Based Technique .... 88
      4.2.4.2 ROI Based Watermark Extraction ....... 89
   4.2.5 Implementation of Tech_Num_5: Image Watermarking Based on DWT-DFT-SVD Domain ............................................. 91
      4.2.5.1 Watermark Embedding in DWT-DFT-SVD Domain .......................................................... 91
      4.2.5.2 Watermark Extraction in DWT-DFT-SVD Domain ......................................................... 93
   4.2.6 Implementation of Tech_Num_6: DWT-FWHT-SVD Based Image Watermarking Robust to Noise Addition and Filtering Attacks 94
      4.2.6.1 Watermark Embedding in DWT-FWHT-SVD Domain .......................................................... 94
      4.2.6.2 Watermark Extraction in DWT-FWHT-SVD Domain ......................................................... 95
   4.2.7 Implementation of Tech_Num_7: Image Watermarking Using MEO ............................................................ 96
      4.2.7.1 Watermark Embedding of MEO Based Technique .... 96
      4.2.7.2 MEO Based Watermark Extraction ....... 98
   4.2.8 Implementation of Tech_Num_8: Applying Image Watermarking to Real World Applications .................................... 99
      4.2.8.1 Implementation of Tech_Num 8.1: Biometric and Wavelet Based E-voting System .................................... 99
      4.2.8.2 Implementation of Tech_Num 8.2: Watermarking based Criminal Authentication System ................................ 103

5 SYSTEM VALIDATION AND RESULT ANALYSIS ........................................ 107
5.1 Performance Evaluation Parameters ........................................... 107
  5.1.1 Perceptual Transparency .................................................. 108
    5.1.1.1 MSE of Grey Scale Image ........................................ 108
    5.1.1.2 Perceptual Transparency of Grey Scale Image .................. 108
    5.1.1.3 MSE for Color Image ............................................. 109
    5.1.1.4 Perceptual Transparency for Color Image ...................... 109
  5.1.2 Robustness ................................................................. 109
    5.1.2.1 Normalised Correlation ........................................... 110
  5.1.3 Capacity ......................................................................... 110
  5.1.4 Security ........................................................................... 110
  5.1.5 Computation Time ............................................................ 111
  5.1.6 Optimization of Perceptual Quality and Robustness .............. 111
5.2 Experimentations and Result Analysis ........................................ 112
  5.2.1 Test Num 1: Selection of Typical Test Images From Large On-
                   line Database Based on Histogram Variation ............... 112
  5.2.2 Test Num 2: Selection of Wavelet from Wavelet Family Based
                   on Time Complexity .................................................. 115
  5.2.3 Test Num 3: Performance of Modified LSB Based Spatial Dom-
                   in Technique Versus DWT based Transform Domain Technique.117
  5.2.4 Test Num 4: Simultaneous Achievement of Imperceptibility and
                   Robustness(SAIR) ....................................................... 120
  5.2.5 Test Num 5: Testing for Effective Handling of ROI and RONI(EHRR)
                   for Medical Images ................................................... 123
  5.2.6 Test Num 6: Testing for Effective Handling of Color Spaces
                   (EHCS) ..................................................................... 125
  5.2.7 Test Num 7: Testing of Watermarking Techniques with Three
                   Level Composition of Transforms .................................... 134
  5.2.8 Test Num 8: Testing of MEO based Watermarking Technique
                   for Optimization of Imperceptibility and Robustness under High
                   Payload Scenario ........................................................... 142
  5.2.9 Test Num 9: Tests showing high degree of robustness for at-
                   tacks(HDRA) ................................................................ 148
    5.2.9.1 Robustness Test with Tech_Num_5 ............................. 148
    5.2.9.2 Robustness Test with Tech_Num_6 ............................. 149
    5.2.9.3 Robustness Test with Tech_Num_7 ............................. 155
  5.2.10 Test Num 10: Testing with High Capacity Considerations ...... 157
  5.2.11 Test Num 11: Applying Proposed Watermarking Technique to
                   Real World Applications ................................................. 160
    5.2.11.1 Biometric and Wavelet Based E-Voting System .......... 160
    5.2.11.2 Watermarking Based Criminal Authentication System 162

xix
