ACKNOWLEDGEMENTS

A scholarly work of this nature is impossible to accomplish without the support, help, guidance and encouragement of innumerable persons and institutions.

It gives me immense pleasure to express my sincerest respect and gratitude for my esteemed supervisor, Dr. R.K. Pathak, Professor, Department of Anthropology, Panjab University, Chandigarh, who infused in me the spirit of a dedicated hard worker through his scholarly erudition, adroit and illuminating guidance, tremendous encouragement and constructive criticism and suggestions throughout the entire course of the present thesis work. I am eternally indebted and grateful to him for nurturing my research aptitude through his keen interests, able guidance, easy approachability, insightful thinking, analytical approach and unflinching support. I really extend my humble gratefulness and reverence to my respected supervisor from the core of my heart as fruition of this endeavour would not be possible without his constant and meticulous guidance and supervision.

I find it difficult to pen down my deepest sense of indebtedness towards my worthy co-supervisor, Dr. Dalbir Singh, Additional Professor and Head, Department of Forensic Medicine, Postgraduate Institute of Medical Education and Research, Chandigarh, who soulfully provided me the constant support and right impetus to undertake this challenge of working with the dead. I am really thankful to him for his overwhelming support and encouragement from the very inception of the present endeavour. I whole heartedly extend my gratitude to him for providing me all the facilities and infrastructure available in the department for data collection.

I owe my profound indebtedness to Prof. K.D. Sharma, Chairperson and Prof. A.K. Sinha, Officiating Chairperson, Department of Anthropology, Panjab University, Chandigarh, for extending me all the possible facilities and co-operation throughout the entire course of accomplishment of this work. Words escape me in penning down my deepest sense of appreciation for Prof. R.N. Vashisht, without whose continuous encouragement, emotional and psychological support, I could not have reached this milestone. I shall remain ever grateful to him for his rightful direction and steadfast support. I also extend my sincere gratitude to the office staff of the Department of Anthropology, Panjab University, Chandigarh, for providing me help and necessary facilities.
Research work is meaningless unless it is supported by statistical analysis. Dr. Suresh Sharma, Reader and Head, Dept. of Statistics, Panjab University, Chandigarh helped me with the statistical analysis of the data contained in this thesis. I am grateful to him for having spared his valuable time for me and for his unconditional support.

I must acknowledge and appreciate the moral support and help and continuous encouragement extended by Dr. Krishan Vij, Professor and ex-Head, Govt. Medical College and Hospital, Chandigarh for having allowed me to take up this difficult task and consequently for having spared me for my almost every day “trips” to either PGIMER or Panjab University for pursuing my research work. In the same vein, I would like to express my gratitude to Dr. B.R. Sharma, Professor and present Head, Department of Forensic Medicine and Toxicology, Govt. Medical College and Hospital, Chandigarh, for continuing similar support.

Words are insufficient to verbalize my gratitude and regards towards Dr. K. H. Chavali, Assistant Professor, Department of Forensic Medicine and Toxicology, Govt. Medical College and Hospital, Chandigarh, whose unrelenting support and endurance and positive discussions motivated me to carry out my work to completion. When my morale ebbed, enthusiasm waned, Dr. Chavali helped me in getting out of it through his constant inspiration and this debt can never be repaid. He is the backbone of this edifice as each and every section of this thesis bears his scholarly stamp. I really thank him for his unflinching support and help rendered in the hour of need. Without his unconditional help and implicit faith in my capabilities, this piece of work would not have seen the light of day.

I would like to place on record the help and support of the staff of the mortuary of PGIMER, Chandigarh in general and Mr. Ashok in particular in helping me with the dissection and processing of the clavicles and sterna used in this study. I am also very thankful for the help and support of Ms. Paramjeet Kaur, Sr. Scale Stenographer and Mr. Sunit Sharma, Clerk, both of the Department of Forensic Medicine and Toxicology, Govt. Medical College and Hospital, Chandigarh throughout the course of this work.
The chain of gratitude would be incomplete without mention of my respected parents whose care, affection and encouragement provided me astound strength, morale and intermittent dosages of adroit guidance. I am ever grateful to God for having given me such parents. Words fail to express my love and immense pleasure for thanking my nephew Ankit Sehrawat and Master Sanyam, my son, for their love and affection extended during whole of this venture.

The references that have been used in the present study have been obtained from the libraries of PGIMER, Chandigarh and GMCH, Chandigarh and also from the Internet. Many other authors with whom I am not personally acquainted with have sent me copies of their works without expecting anything in return from me. I would like to appreciate the support of the library staff of PGIMER, GMCH and the various authors, in this aspect of the work. I am also thankful to all my friends and well wishers who stood by me throughout this research endeavour. I cherished each and every moment of their association during the entire course of work.

The present work could not have been accomplished without the data generated from the subjects of the study – the dead bodies brought for autopsy to PGIMER, Chandigarh. I shall be ever thankful to them as well as the next of kin of the deceased who, even in their time of grief have given consent and co-operation for this research study.

Finally, I am thankful to Mr. Naveen Kumar, BCA student and Ms. Navkiran, Demonstrator, Dept of Biostatics, PGIMER, Chandigarh for helping me in statistical interpretation of data, presentation of the data and results in graphical and tabular form and to bring the entire work to the current presentable state.

Last but not least, there are no words to pay my obeisance to the ‘Almighty’ for blessing me with fortitude and persistence, enthusiasm, peace and good health which helped me in fruitful and successful completion of my work.

- Jagmahender Singh
