ACKNOWLEDGEMENT

I owe my heartiest thanks and gratitude to my most revered teacher and guide, Dr. K.K. Nanda, F.R.S., Senior Professor of Plant Physiology, Department of Botany, Panjab University, Chandigarh. Apart from my proud privilege, it is my sacred duty to express further that it would have been impossible to complete this project without his masterly and majestic guidance, constant encouragement, fatherly affection and critically going through the manuscript besides his invaluable help throughout the course of investigation.

My sincere thanks are due to Prof. H.S. Sohi, Chairman of Botany Department, Panjab University, for providing me with the best available facilities.

During this investigation I am grateful to all my friends in the laboratory, department and hostel for their kind and valued cooperation. My thanks to them.

It gives me immense pleasure in thanking my husband and father-in-law for their keen interest in seeing me accomplish this work. I can hardly be able to mention owing gratitude to them.

It is basically the inspiration, encouragement and assistance from my respected parents that brought me to this level. I am highly indebted to them, whose love and best wishes has stood by me throughout the progress of work.

The opportunity given by Council of Scientific and Industrial Research in the form of Junior Research Fellowship to complete this course is acknowledged with thanks.
