ACKNOWLEDGEMENT

I express my humble prayer to Almighty (Allah) who has bestowed his choicest blessings on me and has provided me the cherished opportunity to complete my thesis.

I am truly indebted to many persons, the ideas and actions of whom, cumulatively have been like a lighthouse which guided by the course on the sea of chance and challenge, opposition and opportunity. If I try, however, to acknowledge individually those who have helped me so much, then I know I shall surely offend by missing some. So, my general thanks and gratitude to one and all.

Nevertheless, some individual acknowledgements are indeed necessary. The conception and completion of this thesis owes much to the encouraging and patient supervision of my esteemed guides Dr. Seema Kapoor and Dr. Sushil Kumar Kansal, Associate Professors, University Institute of Chemical Engineering and Technology, Panjab University, Chandigarh, for their erudite guidance and valuable suggestions during the time of this investigation. They apprised me in minute details about the research work and ensured that my work turns out to be knowledgeable. They have been a perennial source of inspiration for me.

I express my thanks to Prof. V.K. Rattan, Chairman, University Institute of Chemical Engineering and Technology, Panjab University, Chandigarh for providing opportunity and necessary facilities for research.

Ample of thanks to Prof. Sukhmehar Singh and Prof. R.C. Katyal, Institute of Chemical Engineering and Technology, Panjab University, Chandigarh for their inquisitive attitude and expert comments in response to my queries and problems. They were appreciably affectionate and kind to me.

I also owe a huge debit of gratitude to Prof. S.K. Mehta (Department of Chemistry, Panjab University, Chandigarh) for his help and support.

I am highly grateful to Dr Detlef W. Bahnemann (Professor, Institut fu"r Technische Chemie, Leibniz Universita’t Hannover, D-30167 Hannover, Germany) for helping in discussions and analysis of synthesized catalysts.
I am also thankful to Ms. Anupama Thakur and Ms. Gargi Goshal for their help.

I’ll be failing in my duty if I don’t thank Mr. Bageshwar Mishra, Mr. Raj Kishore Sood and all other lab technicians, assistants and other staff members of the institute who have been always ready for help.

Last, but not the least, I feel dearth of words in expressing thanks to my parents for their eternal blessings and affection which kept my courage high during this course.

A penultimate thanks go to all members of my family in Iraq for their kind blessings for pursuing higher studies in a foreign country and always being there when I needed them most. They deserve far more credit than I can ever give them. They sacrificed their comfort and leisure for the studies of my brothers and myself. Their confidence in my determination, ability and capability motivated me a great to achieve this position in life.

I would like to show my deepest gratitude to my wife Huda. She has been my most important support and courage. She has sacrificed more than three years for me as she postponed her study to accompany me to India. My determination remained strong because of her love, patience, understanding, friendship and pride in my achievements. She is my guiding star in the dark nights, giving me the strength to keep going. She has filled all these years with fun, love and joy and she has given me the most wonderful gift on earth, the light of my eyes, my daughters, Noor, Farah and newly born baby girl Zainab.

A sense of apology is due to Noor and Farah who have probably missed many precious moments of fatherly love and care.

Last, but not the least, I feel dearth of words in expressing thanks to Indian Council for Cultural Relations (ICCR), Ministry of External Affairs, Government of India, to give this scholarship to me.

(Ahmed H. Ali)
