ACKNOWLEDGEMENT

The work was carried out at the National Salmonella and Escherichia Centre, Central Research Institute, Kasauli during September, 1970 - February, 1974.

My greatest debt of gratitude is due to Dr. Samiran Basu, M.B.B.S., D.Phil., Head, National Salmonella and Escherichia Centre, for his guidance during the course of the study.

I am indebted to the World Health Organization, Heads of various Public Health and Research Laboratories outside India and Heads of Public Health, Research and Teaching Institutions in India who have kindly forwarded Salmonella cultures isolated by their Laboratories/Institutions from their respective areas to the National Salmonella and Escherichia Centre which enabled me to utilize the cultures from various geographical areas.

I am grateful to Dr. A. Narayanaswami, Scientist, Indian Institute of Experimental Medicine, Calcutta for his active interest and help without which it would have been very difficult for me to complete the thesis.

I am also grateful to Dr. A.K. Thomas, Director, Central Research Institute, Kasauli for his active interest in the study.
