DEDICATED

TO

MY BELOVED SON

Soumil Tangri
ACKNOWLEDGEMENT

“To acknowledge is to know gratitude and gratitude is a valuable duty which ought to be paid to valuable people in a lifetime”

I thank the Almighty God for his blessings in making this work possible, and whose grace strengthened me throughout my course. Thanks-giving is a pleasant job, but it is none the less difficult where one sincerely tries to put them in words. These humble words, expressions and gratitudes cannot really convey the deep feelings of my heart.

I am grateful to my department of biochemistry which deserves a special place for disciplining my professional life and significant contribution at every stage of preparation.

With high esteems and profound regards, I take the privilege to acknowledge my sincere gratitude to my worthy guide (Dr. K. S. Sodhi, Professor, Department of Biochemistry) and co-guide (Dr. Jagdish, Professor, Department of Medicine) for carving another milestone in my academic journey. Their painstaking efforts in suggesting, designing, advising and improving the study throughout the entire span of investigation and for inexhaustible encouragement, enabled me to complete the research work satisfactorily. It has been very fortunate for me to be blessed with such learned and dignified
personalities. Words, indeed, are poor substitutes to express my obligation due to them. It is said that in some circumstances in your life, even words become void to express heartiest feelings. I feel so right at this moment.

It is a futile attempt in search of abstracts to express my deep and sincere sense of respect, regards, gratitude and indebtedness for my esteemed Professor and Head - Dr. Jasbir Singh for his advancing encouragement, valuable guidance and full support from time to time. His wise and concrete suggestions and meticulous attention helped me to complete this work.

These few lines can hardly do justice if I try to appraise my gratefulness, admiration and regards for Dr. Rajesh Pandey, Professor, Department of Biochemistry for his exquisite propositions and expert counsel during preparation of this thesis. I am indebted to him for this endeavour and look forward to his guidance forever.

Words are inadequate to express thanks to all my teachers especially Dr. Suvarna Prasad, Dr. Neeru Bhaskar, Dr. Shikhaa Mahajan and Dr. Sunita Manhas for their timely help, moral support and suggestions throughout the period of completion of this study.

All my efforts shall go in vain, if I do not thank my colleagues especially Dr. Kusum Singla (my best friend), Dr. Pallavi Mahajan and Dr Jitender. It
would not have been possible to carry out this work without their active and unstinted involvement.

From my inner core of heart, I want to mention special word of thanks to my best friend, Dr. Nitin Tangri (my husband) for his full support and flawless encouragement. His moral support and love helped me to tide over occasional moments of distress. The completion of my work would never have been possible without him.

Soumil, my little adorable and loving son, has been my life’s greatest blessing. His broad smile and a tight hug at the time of distress helped me forgot all those stressed moments and infused me every time with a new zeal, motivation and strength for completion of the work.

I shall ever remain indebted to my heaven, of course, my mother and younger brother - Amandeep who are a constant source of inspiration and encouragement to me. I owe this thesis to my beloved father-in-law, Mr. Manohar Lal for his ever-lasting love, care and constant attention and encouragement. I also thank my mother-in-law, Mrs. Veena and brother-in-law, Hitesh for their help and support.
I am also thankful to all the technical staff members especially Mr. Basant, Mr. Amit, Mr. Tarun and Mr. Sahil for their unstinted help whenever needed.

Last, but not least, I must also thank my patients without whose cooperation, I would not have succeeded in my endeavour and bring out this work.
