Acknowledgements

It is my profound privilege to express my deep and sincere gratitude to my esteemed supervisor, Prof. V. K. Jindal. His wide knowledge and logical way of thinking have been of great value for me. His understanding, encouraging and personal guidance has provided a good basis for the present thesis.

I want to thank my co-supervisor Prof. (Mrs.) Keya Dharamvir. She has taught me, both consciously and unconsciously, how physics is being done. The joy and enthusiasm she has for her research was contagious and motivational for me, even during tough times in the Ph.D. pursuit. I am also thankful for the excellent example she has provided as a successful woman physicist and professor.

A special thanks and a grateful acknowledgement goes to Dr. Hitesh Sharma, who is most responsible for helping me complete the writing of this dissertation as well as the challenging research that lies behind it. He taught me how to write academic papers, made me a better programmer, had confidence in me when I doubted myself, and brought out the good ideas in me. Without his encouragement and constant guidance, I could not have finished this thesis. He was always there to meet and talk about my ideas, to proof read and mark up my papers and chapters, and to ask me good questions to help me think through my problems (whether philosophical, analytical or computational). I want to express my deepest regards to Dr. Harleen Dahiya, whose kindness and encouragement has always strengthened my belief in my work.

My sincere thanks also goes to Prof. D. G. Kanhere, Pune University, for offering me the opportunity to work in his group and leading me to work on diverse exciting projects related to my research field.

I am thankful to the Chairman, Department of Physics, Panjab University for providing adequate facilities to work in the department. I acknowledge the support and confidence provided by University Grant Commission (UGC) for carrying out this work.

I would like to thank my lab-mates for their unending support through whole of my research period. I could have never imagined that I would find such special friends, as the ones I met in my lab at Panjab University. No words can describe the type of bond I share with Kiran Di, who was always by my side in happy as well as tough times. She was always present for helping me out from all kind of problems with her suggestions and discussions. A special thanks to Ali Sir and Neha Di who made me feel at home and their
constant encouragement always lifted me up. They all have given me the friendship and
the strength that I needed while working and writing this thesis. I am heartily thankful
to my seniors Shuchi Di, Narinder Di, Veena Mam, Priyanka Di, and Shobhna Mam for
their constant guidance and support. I also want to thank Pooja, and Sheetal for creating
enjoyable environment in the lab.

I am extremely grateful to my department friends for giving me such a wonder­ful
environment to work and enjoy. We have shared some unforgettable and enjoyable
moments, so this is the right moment to appreciate them. A special thanks to Manie,
Monika, Sumali, Prabhdeep, Nishu, Archana Di, Neha and Preeti for making my stay in
hostel a lifetime experience.

I am heartily thankful to my dear friends Vishu, Jessica, Rishu, Nonu, Avi, Yo­
gesh, Charanjeet, Vijay, and Ajay for their never ending help and support. Their jokes
have always uplifted my mood in harsh times.

This thesis will be incomplete without the mention of my wonderful in-laws. My
Mom, Dad and Jass’ di have showered me with so much love and affection that I can't
believe my luck. With their encouragement and support I have been able to complete this
whole work efficiently.

I am now speechless as I am mentioning the name of my soulmate, my life-partner
Supreet Pal. He is the biggest strength of my life who has always been standing like a wall,
and on which I rely blindfold. His love and care throughout my life has made me strong
and without his suggestions, this work would not have been completed.

My deepest gratitude goes to my family for their unflagging love and support
throughout my life. This dissertation was simply impossible without them. I am indebted
to my father and mother for their understanding and ever-lasting love. They have always
supported me in every way and whatever I chose in my life. My father has a never die
attitude towards life from which I have learnt a lot and it always helped me to achieve
my goals. My mother, she is simply the best and has always worried and prayed for me
more than anyone else. My elder brother deserves a special mention here as he, in a very
different way, is responsible for my entry to research field. He has always strengthened
my beliefs and supported me throughout this work. I want to specially appreciate my
bhabhi “Priyanka” for her ever-present support and affection. My little flower, my nephew
“Nannu”, has always helped me to forget all my worries with his playful and smiling faces.
Also my cousin sister “Kittu” deserves a special thanks for her ways to make me smile
during her stay with me. Last but not the least, I remain indebted to my Nanaji and Naniji for their support and believing in my abilities. My family has dreamt of this day for me and I am thankful to God for helping me to complete their dream. I dedicate this thesis to my loving and caring family.
