## List of Tables

1.1 Curie temperature of group-III-VI-II-VI and group IV doped semiconductor clusters ................................................................. 9

3.1 The bond length of (Ge)$_n$, n = 1-14 clusters ........................................ 63

3.2 The binding energy per atom (B.E./A), Dissociation energy (DE) and second difference of energy $\Delta^2E$ for Ge$_n$TM (TM = Cr, Mn, Co, Ni). The positive and negative signs represents energy gain and loss respectively. ................................................................. 67

3.3 The total spin magnetic moment of the Ge$_n$Cr clusters, $\mu_{Cr}$ is the local magnetic moment on Cr atom; and $\mu_{3d}$, $\mu_{4s}$ and $\mu_{4p}$ are magnetic moments of the 3d, 4s, 4p states of Cr atom respectively. $\mu_{ind}$ is the maximum induced magnetic moment on nearest Ge atoms. ............. 87

3.4 The Total magnetic moment $\mu_{total}$, $\mu_{3d}$, $\mu_{4s}$ and $\mu_{4p}$ are the magnetic moments of the 3d, 4s, 4p states of Mn atom respectively. $\mu_{3d}$ and $Q_{3d}$ are the Local magnetic moment and charge of Mn atom. $(\delta_1)$ and $(\delta_2)$ are the spin-up and spin-down gaps. ........................................ 89

3.5 The Total magnetic moment $\mu_{total}$, $\mu_{3d}$, $\mu_{4s}$ and $\mu_{4p}$ are the magnetic moments of the 3d, 4s, 4p states of Co atom respectively. $\mu_{Co}$ and $Q_{Co}$ are the Local magnetic moment and charge of Co atom. $(\delta_1)$ and $(\delta_2)$ are the spinup and spindown gaps ......................................................... 91

4.1 Magnetic moments (MM) of single TM atoms and TM-TM bond length with ferromagnetic (FM) and antiferromagnetic (AFM) interactions (in Å) ................................................................. 102

4.2 Average C-C and C=C bond lengths (in Å) for all fullerene cages when encapsulated with 3d-TM .................................................. 104
4.3 The cohesive energy ($\Delta E$) of TMs encapsulated inside small fullerene cages. The negative value of $\Delta E$ corresponds to unstable TM encapsulated inside the cage. .......................... 104

4.4 The magnetic moments at TM site inside $C_{20}$ and $C_{28}$ cages, $\mu_{TM}$, and the individual contributions of 3d, 4p, 4s orbitals of TM atoms, $\mu_{3d}$, $\mu_{4p}$, and $\mu_{4s}$, are tabulated respectively. ......................... 115

4.5 The magnetic moments at TM site inside $C_{32}$ and $C_{36}$ cages, $\mu_{TM}$, and the individual contributions of 3d, 4p, 4s orbitals of TM atoms, $\mu_{3d}$, $\mu_{4p}$, and $\mu_{4s}$, are tabulated respectively. ......................... 116

4.6 Average C-C and C=C bond lengths (in Å) for all fullerene cages when encapsulated with 3d-TM. ................................................. 117

5.1 The bond length and cohesive energy of $O_2$, $N_2$, $ZnO$, $ZnC$ and $ZnN$ molecules. ........................................................... 130

5.2 The formation energies ($E_{Formation}$) in eV of $Zn_nO_{n-j}C$ clusters for $n = 1-12, 16$. ........................................................... 135

5.3 Total magnetic moment per C atom ($\mu_{total}/C$) and average local magnetic moments of interstitial C dopants and of adjacent O, Zn atoms bonded to C dopants in pure and substitutionally doped $ZnO$ clusters. 139

5.4 The formation energy, $Zn$-N and $Zn$-O bond length of singly N doped $(ZnO)_n$ clusters. .................................................. 148

6.1 The bond length and cohesive energy of $O_2$, $ZnC$, $ZnO$ and $ZnN$ molecules. ........................................................... 168

6.2 The binding energy per $ZnO$ unit for C:N, B:N and B:C doped $(ZnO)_n$ clusters. .................................................. 185
