PREFACE

Physio-morphological study of the growing apex of Callistemon viminalis started in the year 1962 at the Forest Research Institute, Dehra Dun was continued in the Panjab University, Chandigarh. As the results obtained in successive years were found to be similar, only the results of exp'ts carried out during the year 1964 are included in this thesis.

I am highly indebted to my teacher, Dr. K.K. Nanda, Professor of Plant Physiology, Panjab University, Chandigarh for suggesting the problem and for his efficacious guidance throughout the course of this investigation.

I am obliged to Prof. P.N. Mehra, Head of the Panjab University Botany Department, Chandigarh for providing the laboratory facilities and to Dr. Anand for permitting me to use the plant material from the trees growing in his premises in Sector 16, Chandigarh.

I also acknowledge with gratitude the gratis co-operation and help rendered by my colleagues of the Plant Physiology Section and in particular Mr. H.N. Krishna Moorthy and Miss Adarsh Bala, Research Scholars for their unstinted help during the preparation of this manuscript.

It gives me great pleasure to thank Dr. M.S. Tayal, Associate Professor of Botany, D.A.V. College, Muzaffarnagar; Miss S. Dhanraj, ex-student of this department and Miss Manju Mehra, Lecturer in Botany, Government College, Chandigarh for their help in making some diagrams.

I also wish to thank Mr. Mohinder Singh for his quick-clean approach in typing the manuscript.

(ADITYA NARAIN PURCHIT)
