Acknowledgement

At the outset, I place on record my indebtedness to my guide Dr. Jagdeep Kaur, Department of Biotechnology, Punjab University, Chandigarh for enlightening & showing me the path towards the completion of this piece of dissertation. Her perpetual inspiration, motivation, energy, vigor, and hands on approach have imbied in me an ability of continuous learning which extends well within and beyond the scope of research. Without her, this journey would have been a figment of imagination. I express a deep sense of respect toward her.

I am extremely grateful to Prof. K.C. Sobti, Chairman; Department of Biotechnology for allowing me to make use of requisite university resources for fulfilling this research objective. Their guidance was affectionate and immense.

My special thanks are due to University Grant Commission and Department of Biotechnology, New Delhi for granting funds for Lipase project.

My thanks are due to the company of colleagues like Nippy, Manisha, Rupinder, Navneet and Jagtar whose contribution as a knowledge pool was of great importance. I feel great to be a part of such a fraternity.

I am also thankful to Bharat, who, in spite of his busy schedule, had taken some time to help me in carrying out the experiments.

I am also thankful to my mother, father, mother in law, father in law, Bobby and Toshi for extending the love, care and extreme co-operating at the time when it was warranted most.

I owe a lot to my brother Naveen for pushing me into the field of science where each revelation is as wonderful as his insight, which he had provided during the moments of vacillation.

I am also thankful to all those who have helped me in any direct or indirect way.

And finally, a small submission, its great feeling to get married and do thesis.... “Thank you Rajesh”!!
