List of Tables

Table 3.1 Properties of Cement Conformity ............................................................... 50
Table 3.2 Sieve analysis of Sand ................................................................................ 53
Table 3.3 Sieve Analysis of Normal and Recycled Aggregates .................................. 57
Table 3.4 Characteristics of Recycled Aggregates in Comparison to Normal Aggregates 58

Table 4.1 Removal of Adhered Mortar Content by Dry Rolling ................................. 66
Table 4.2 Removal of Adhered Mortar Content by Treatment with Acids ..................... 68
Table 4.3 Removal of Adhered Mortar Content by Thermal Treatment ....................... 69
Table 4.4 Removal of Adhered Mortar Content by Combined Mechanical and Chemical Treatment
Table 4.5 Removal of Adhered Mortar Content by Environmental Cycles followed by Dry Rolling

Table 4.6 Percent Reduction in Adhered Mortar for Samples R_1 to R_5 ..................... 75
Table 4.7 Percent Reduction in Adhered Mortar for Samples R_6 to R_10 ..................... 77
Table 4.8 Percent Reduction in Adhered Mortar and Water Absorption by Proposed Method

Table 5.1 Combination of Normal and Recycled Aggregates .................................. 88
Table 5.2 Test Programme ......................................................................................... 89
Table 5.3 Compressive Strength of Controlled Concrete ............................................ 90
Table 5.4 Compressive Strength of Recycled Aggregate Concrete - Set1 ..................... 96
Table 5.5 Compressive Strength of Recycled Aggregate Concrete - Set 2 .................... 98
Table 5.6 Compressive Strength of Recycled Aggregate Concrete - Set 3 ................. 101
Table 5.7 Compressive Strength of Recycled Aggregate Concrete - Set 4 ................. 103
Table 5.8 Compressive Strength of Recycled Aggregate Concrete - Set 5 ................. 105
Table 5.9 Compressive Strength of Recycled Aggregate Concrete ............................. 111
with Processed Recycled Aggregates

Table 5.10 Compressive Strength of all Recycled Aggregate Samples
Table 5.11 Characteristic Compressive Strength Compliance Requirement
Table 5.12 Standard Deviation Analysis
Table 6.1 Mix Proportion of Recycled Aggregate Concrete
Table 6.2 Test Data of Compressive Strength with Water Cement Ratio
Table 6.3 Regression Coefficients
Table 6.4 Validation of the Regression Model
Table 7.1 Rapid Chloride Permeability Readings
Table 7.2 Chloride Ion Permeability based on Charge Passed (ASTM: C1202-2012)
Table 7.3 Comparison of RCPT Readings
Table 7.4 Water Permeability Readings
Table 7.5 Permeability Ranges as per Standard DIN:1048 (Part 5)-2006
Table 7.6 Comparison of Water Permeability Results
Table 7.7 Load Deformation Readings
Table 7.8 Modulus of Elasticity Readings
Table 7.9 Comparison of Modulus of Elasticity Results
Table 7.10 Drying Shrinkage Readings
Table 7.11 Comparison of Drying Shrinkage Values
Table 7.12 Creep Coefficient of Recycled Aggregate Concrete
Table 7.13 Creep coefficient θ for three Values of Age of Loading IS: 456-2000
Table 7.14 Comparison of Creep Coefficient with Modulus of Elasticity
Table 8.1 Cost towards Transportation and Processing of Old Crushed Concrete
Table 8.2 Cost Comparison of Normal and Recycled Aggregate Concrete
