ACKNOWLEDGEMENT

I gratefully acknowledge the guidance of Dr. A.M. NALLAGOUNDEN, whose zeal for perfection has greatly influenced my work.

I am grateful to the authorities of the Department of Science and Technology, Government of India for having granted me a two-year fellowship on their project which has helped in the easy access to the data and computer facility. To be also acknowledged is the staff and friends of the Econometrics Department and the Geography Department for extending help whenever needed. I am grateful to Dr. S. SUBBIAH and Dr. V. VASANTHA for all their timely assistance.

I am also thankful to my project colleagues KAMALESH, MADHESWARAN and RAMASAMY for their assistance in helping me handle the software packages; NAYANTARA who has helped me in the proof reading of the thesis; and VISALAKSHI of Students Xerox for her efficient typing. My thanks are also due to Mrs. NALLAGOUNDEN for her warmth and hospitality.

Lastly, this thesis would not have been possible but for the excellent support from my family, especially my dear parents. A wonderful husband and son have only proved that anything is possible with a little bit of love and understanding. I also remain indebted to our club the ‘fem.bondage’ for spurring my interest on women’s issues.
