INDEX

i.  Abstract ................................................................. i

ii. Glossary of symbols ................................................. vi

iii. List of Tables ........................................................ vii

iv.  List of Figures ........................................................ viii

Chapter 1 : Introduction ................................................. 1-15

1.1  Dielectrics

1.2  Polar and Non Polar Molecules

1.3  Properties of dielectrics and their importance

1.4  Dielectric Spectroscopy

1.5  Literature Survey

1.6  Objective of the Present Work

References

Chapter 2 : Different Theories of Dielectrics .......................... 16-59

2.1  Introduction:

2.2  Theories of Static Permittivity

2.3  Theories of Dynamic Permittivity

2.4  Different Models of Dynamic Permittivity

2.5  Dielectric Study of Biological Systems

2.6  Dielectric Properties of Blood

References
Chapter 3 : Experimental Technique and Data Analysis  
3.1 Introduction  
3.2 Basic Principle of TDR  
3.3 Reflections from Various Terminations  
3.4 Time window and Source of Errors  
3.5 The Developed setup of TDR Unit  
3.6 TDR Waveforms  
3.7 Experimental Procedure and Data Acquisition  
3.8 TDR Setup for Blood Samples  
References

Chapter 4 : Detection of Human Blood Sugar  
4.1 Introduction  
4.2 Experimental  
4.3 Method to Determine Blood Sugar Using Direct Waveform  
4.4 Relation Between Peak Voltage and Blood Sugar  
References

Chapter 5 : Detection of Human Blood Groups  
5.1 Determine Blood Sugar Using Direct Waveform  
5.2 Blood Sugar Level and Blood Group  
5.3 Results and Discussion

Chapter 6 : Conclusions and Future Scope of Study  
References
