INFRA-RED SPECTRA
This section contains the reproduction of the Infra-red spectra of the following synthesised terpenoids mentioned in the text. All these spectra were recorded on Beckmann I.R.5 with sodium chloride optics using a thin liquid film.

(1) $\beta$-Terpineol.

(2) Dipentene.

(3) $1(7),8$-$\alpha$-Menthadiene.

(4) The structure assigned to isobisabolene.

(5) $\beta$-Bisabolene.

(6) Structure assigned to veticadinol.

(7) dl.$\alpha$.Ar.Artemisene.
