List of Table with captions

**Table 1.1:** Composition of a Pressurized Heavy Water Reactor (PHWR) High Level Waste (HLW); Burn up: 7000 MWd/t; Acidity: 3-4 M HNO₃; Cooling period: 5 years

**Table 1.2:** Typical percentages of components making up spent nuclear fuel along with suggested approaches for disposal

**Table 1.3:** Long lived actinide isotopes with their half lives

**Table 1.4:** Electronic configuration of lanthanide and actinide elements

**Table 1.5:** Oxidation states of the actinide elements

**Table 1.6:** Disproportionation reactions of actinides in aqueous solutions

**Table 1.7:** Different solvent extraction processes proposed or being used in nuclear industries

**Table 2.1:** Composition of PHWR-SHLW; Burn up: ~6500 MWd/T; Cooling period: 5 years; Acidity: 3 M HNO₃

**Table 3.1:** Comparison of developed method with conventional procedures

**Table 3.2:** Effect of nature of acid on the aggregation behavior of diamides; Diluent: n-dodecane; T: 25±2 °C

**Table 3.3:** Distribution behavior of different metal ions; Extractant: 1 M DMDOHEMA/ n-dodecane; T: 25±2 °C

**Table 3.4:** Fission/activation product(s) distribution data under SHLW conditions using 1 M DMDOHEMA/n-dodecane as solvent; T: 25±2 °C

**Table 3.5:** Comparison of Am(III) extraction by different extractants with DMDOHEMA, T = 25±2 °C

**Table 4.1:** Am(III) transport behavior in membrane stability experiments; Feed: 3M HNO₃; Carrier: 1M DMDOHEMA in n-dodecane; Receiver: 0.01M HNO₃

**Table 5.1:** Comparison of malonamide extractant (L) and diluent compositions for Am(III) extraction; T: 298 K

**Table 5.2:** Comparison of different metal ions extraction profile by malonamides in RTILs extractants: 0.02M DMDBTDMA, 0.02M DMDOHEMA; Acidity: 0.5M HNO₃; Ionic liquid: [C₄mim][NTf₂]; T: 298 K

**Table 5.3:** Fluorescence life time and number of water molecules associated with Eu(III) in aqueous and organic phases (RTIL and n-dodecane)

**Table 5.4:** Change in %transmittance of signature peak 1641 cm⁻¹ of malonamides by radiolytic degradation in RTIL medium ([C₄mim][NTf₂])

**Table 5.5:** Possible degradation products for malonamides and their GCMS analysis
