List of Scheme:

**Scheme 1.1:** General methods used to prepare metal NPs in ILs............................. 18

**Scheme 1.2:** Preparation of metal NPs using the hydroxyl group attached on the imidazolium cation as reducing agents.................................................................................................................21

**Scheme 4.1:** Mechanism of MNPs formation by TBPOH moiety followed by stabilization through nitrogen site of AA IL.......................................................... 111

**Scheme 5.1:** Reaction mechanism for the generation of SHSs using LET amphiphile and Mechanistic pathway for generation of hollow spheres using LET amphiphile.............129

**Scheme 5.2:** Schematic Illustration of Pt nanoparticles formation by radiolysis in the presence of SiO$_2$. Step (a) three dimensional growth of Pt nanoparticle present in pores of SiO$_2$ walls and step (b) methanol oxidation. Aq-Aqueous SiO$_2$ particle , Pt particle.........135

**Scheme 5.3:** Schematic diagram depicting the polymerization of anthranilic acid on the surface................................................................. 144
