**LIST OF TABLES**

**TABLE I**
List of cultures used in the study and their particulars.

**TABLE II**
List of phages used in the study and their particulars.

**TABLE III**
List of soil samples tested, nature of the soil and the organisms used for enrichment.

**TABLE IV**
List of stool samples tested, obtained from tuberculosis patients and healthy persons.

**TABLE V**
Results of phage assay and routine test dilution of the phages isolated from soil and stools.

**TABLE VI**
Cross neutralization tests of mycobacteriophages.

**TABLE VII**
Results of one-step growth experiment on phage GI-1.

**TABLE VIII**
Host specificity of the phages isolated from soil and stools.

**TABLE IX**
Phage susceptibility of standard strains of M.tuberculosis var hominis against phages isolated in India and those obtained from other sources from abroad.

**TABLE X**
Phage susceptibility of standard strains of M.tuberculosis var bovis against phages isolated in India and those obtained from other sources from abroad.

**TABLE XI**
Phage susceptibility of standard strains of M.avium against phages isolated in India and those obtained from other sources from abroad.

**TABLE XII**
Phage susceptibility of standard strains of Runyon's Group I anonymous mycobacteria against phages isolated in India and those obtained from other sources from abroad.

**TABLE XIII**
Phage susceptibility of standard strains of Runyon's group II anonymous mycobacteria against phages isolated in India and those obtained from other sources from abroad.
### TABLE XIV
Phage susceptibility of standard strains of Runyon's group III anonymous mycobacteria against phages isolated in India and those obtained from other sources from abroad.

### TABLE XV
Phage susceptibility of standard strains of Runyon's group IV anonymous mycobacteria against phages isolated in India and those obtained from other sources from abroad.

### TABLE XVI
Phage susceptibility of standard strains of saprophytic mycobacteria against phages isolated in India and those obtained from other sources from abroad.

### TABLE XVII
Phage susceptibility patterns of saprophytic mycobacteria.

### TABLE XVIII
Phage susceptibility of India strains of mycobacteria regarded as typical tubercle bacilli on the basis of cultural characters and biochemical activities.

### TABLE XIX
Cultural characters, biochemical activities and drug sensitivity of Indian strains of mycobacteria considered as typical tubercle bacilli.

### TABLE XX
Phage susceptibility of Indian strains of mycobacteria regarded as belonging to groups other than typical tubercle bacilli on the basis of cultural characters and biochemical activities.

### TABLE XXI
Cultural characters, biochemical activities and drug sensitivity of India strains of mycobacteria regarded as belonging to groups other than typical tubercle bacilli.

### TABLE XXII
Phage types of human tubercle bacilli based on phage susceptibility to 4 phages - CRI-3, CRI-9, DS6A, and GS4E.

### TABLE XXIII
Phage types of human tubercle bacilli based on phage susceptibility to 5 phages - CRI-3, CRI-9, DS6A, GS4E, and BGL.

### TABLE XXIV
Phage types of human tubercle bacilli based on phage susceptibility to 8 phages - CRI-3, CRI-9, DS6A, GS4E, BGL, C3PS, AXL, and BM4PS.

### TABLE XXV
Phage susceptibility patterns of human strains of mycobacteria obtained from laboratories in Northern India and those obtained from laboratories in Southern India, based on 4 phages - CRI-3, CRI-9, GS4E, and DS6A.
TABLE XXVI  Phage susceptibility patterns of cultures derived from index cases of pulmonary tuberculosis and their corresponding contacts.

TABLE XXVII  Presence or absence of inhibitory substances (prophage or bacteriocin-like substance) spontaneous or after induced irradiation with ultraviolet light and after treatment with hydrogen peroxide.

TABLE XXVIII Confirmed of mycobacterial strains for lysogeny and bacteriocinogeny.

TABLE XXIX  Confirmation of mycobacteria for bacteriocinogeny.

TABLE XXX  Spectrum of activity on different strains of mycobacteria of bacteriocin-like substances.

TABLE XXXI  The spectrum of activity of two bacteriocins specific for M. tuberculosis H37Rv and M. Kansasi, on human and Runyon's Group I strains.

TABLE XXXII  Thermal stability of bacteriocin-like substances.

TABLE XXXIII  Phage susceptibility of phage CHI-7 (1) and CHI-7 (11) against authentic bovine strains received from various sources.

TABLE XXXIV  Phage susceptibility of parent sensitive cultures and their drug resistant mutants developed in the laboratory at two levels of drug resistance.

TABLE XXXV  Phage susceptibility patterns of some cultures of known virulence.

TABLE XXXVI  Prevalence of drug resistant tubercle bacilli in different centres of India.
