List of Tables

Table 1. Physico-chemical parameters (mean ± Sd) recorded in different study sites. Values in the parenthesis represents ranges.

Table 2. Karl Pearson correlation co-efficient (r) among habitat parameters of the study sites.

Table 3. Diversity indices of the study sites.

Table 4. Species composition in various sites.

Table 5. Jaccard similarity index (Ji) of anuran amphibians (composition) recorded in the present study.

Table 6. Incidence of occurrence (%) of *N. aliciae* species.

Table 7. Mean population density (No./100m²) of *N. aliciae* and the results of ANOVA test calculated for each sample between years.

Table 8. Details of the mark-recapture study.

Table 9. Correlation co-efficient between the density of *N. aliciae* and physico-chemical parameters of the study sites.

Table 10. Result of one way ANOVA for the selected parameters between grouped sites.

Table 11. Density of *N. aliciae* recorded from the grouped sites.

Table 12. Total abundance frogs and proportion of *N. aliciae*.

Table 13. Regression model of density of *N. aliciae* on air temperature (°C).

Table 14. Regression model of density of *N. aliciae* on illuminosity (Lux).

Table 15. Regression model of density of *N. aliciae* on soil temperature (°C).

Table 16. Regression model of density of *N. aliciae* on soil moisture content (%).

Table 17. Regression model of density of *N. aliciae* on canopy cover (%).

Table 18. Significant relationship of air temperature with other habitat variables.

Table 19. Significant relationship of water temperature with other habitat variables.
Table 20. Significant relationship of soil temperature with other habitat variables.

Table 21. Significant relationship of litter temperature with other habitat variables.

Table 22. Significant relationship of canopy cover with other habitat variables.

Table 23. Significant relationship of illuminosity with other habitat variables.
