3.8 LIMITATION OF THE STUDY 82
3.9 MEASURES 82
3.9.1 PERSONAL INFORMATION 83
3.9.2 MEASUREMENT OF SOMATIC SYMPTOMS 83
3.9.3 MEASUREMENT OF PSYCHOLOGICAL SYMPTOMS 84
3.9.4 MEASUREMENT OF STRESS RESILIENCE 85
3.9.5 MEASUREMENT OF TRAIT ANXIETY 86
3.9.6 MEASUREMENT OF STATE ANXIETY 87
3.9.7 MEASUREMENT OF STATE ANGER 88
3.9.8 MEASUREMENT OF TYPE A/B PERSONALITY 89
3.9.9 MEASUREMENT OF COPING CHECK LIST 90
3.9.10 MEASUREMENT OF QUALITY OF LIFE. 92
3.10 RESEARCH SETTING 96
3.11 METHOD OF DATA COLLECTION 97
3.12 STATISTICAL ANALYSIS 98

IV. RESULTS AND DISCUSSION 99-166

4.1 Cardiac surgical patients based on age, gender, habits, type of food consuming and family history of heart disease. 99
4.2 Habit pattern among cardiac surgical patients 100
4.3 Mean scores and SD of stress between preoperative and follow up periods among cardiac surgical patients. 102
4.4 Frequency distribution of somatic symptoms among cardiac surgical patients during preoperative and follow up periods 104
4.5 Frequency distribution of stress resilience among cardiac surgical patients during preoperative and follow up periods 105
4.6 Frequency distribution of psychological symptoms among cardiac surgical patients during preoperative and follow up periods 106
4.7 Comparison of stress symptoms among cardiac surgical patients between preoperative and follow up periods 107
4.8 Mean scores and SD of anxiety between preoperative and follow up periods among cardiac surgical patients 109
4.9 Frequency distribution of trait anxiety among cardiac surgical patients during preoperative and follow up periods 111
4.10 Frequency distribution of state anxiety among cardiac surgical patients during preoperative and follow up periods 112
4.11 Frequency distribution of state anger among cardiac surgical patients during preoperative and follow up periods 113
4.12 Comparison of anxiety symptoms among cardiac surgical patients between preoperative and follow up patients 114
4.13 Mean Scores and SD of coping strategies between preoperative 116
and follow up periods among cardiac surgical patients

4.14 Frequency distribution of problem solving among cardiac surgical patients during preoperative and follow up periods

4.15 Frequency distribution of positive distraction among cardiac surgical patients during preoperative and follow up periods

4.16 Frequency distribution of negative distraction among cardiac surgical patients during preoperative and follow up periods

4.17 Frequency distribution of acceptance/redefinition among cardiac surgical patients during preoperative and follow up periods

4.18 Frequency distribution of religion/faith among cardiac surgical patients during preoperative and follow up periods

4.19 Frequency distribution of denial/blame among cardiac surgical patients during preoperative and follow up periods

4.20 Frequency distribution of social support among cardiac surgical patients during preoperative and follow up periods

4.21 Comparison of coping strategies among cardiac surgical patients between preoperative and follow up periods

4.22 Mean scores and SD of quality of life between preoperative and follow up periods among cardiac surgical patients

4.23 Frequency distribution of overall perception of life among cardiac surgical patients during preoperative and follow up periods

4.24 Frequency distribution of satisfaction with health among cardiac surgical patients during preoperative and follow up periods

4.25 Frequency distribution of physical domain among cardiac surgical patients during preoperative and follow up periods

4.26 Frequency distribution of psychological domain among cardiac surgical patients during preoperative and follow up periods

4.27 Frequency distribution of social relation domain among cardiac surgical patients during preoperative and follow up periods

4.28 Frequency distribution of environment domain among cardiac surgical patients during preoperative and follow up periods

4.29 Comparison of quality of life among cardiac surgical patients between preoperative and follow up periods

4.30 Overall mean and SD of stress anxiety, coping strategies and quality of life among cardiac surgical patients during preoperative and follow up periods

4.31 Correlation between personality type A/B and stress symptoms among cardiac surgical patients

4.32 Correlation between personality type A/B and anxiety among cardiac surgical patients

4.33 Correlation between personality type A/B and coping strategies among cardiac surgical patients

4.34 Correlation between personality type A/B and quality of life among cardiac surgical patients

4.35 Comparison of levels of stress among cardiac surgical patients
during preoperative and follow up period

4.36 Comparison of levels of anxiety among cardiac surgical patients during preoperative and follow up period  

4.37 Comparison of levels of coping strategies among cardiac surgical patients during preoperative and follow up period  

4.38 Comparison of levels of quality of life among cardiac surgical patients during preoperative and follow up period  

4.39 Association between stress and anxiety among cardiac surgical patients during preoperative period  

4.40 Association between stress and coping strategies among cardiac surgical patients during preoperative period  

4.41 Association between stress and quality of life of cardiac surgical patients during preoperative period  

4.42 Association between anxiety and coping strategies among cardiac surgical patients during preoperative period  

4.43 Association between anxiety and quality of life among cardiac surgical patients during preoperative period  

4.44 Association between coping strategies and quality of life among cardiac surgical patients during preoperative period  

4.45 Association between stress and anxiety among cardiac surgical patients during follow up period  

4.46 Association between stress and coping strategies among cardiac surgical patients during follow up period  

4.47 Association between stress and quality of life among cardiac surgical patients during follow up period  

4.48 Association between anxiety and coping strategies among cardiac surgical patients during the follow up period  

4.49 Association between anxiety and quality of life among cardiac surgical patients during the follow up period  

4.50 Association between coping strategies and quality of life among cardiac surgical patients during the follow up  

V. SUMMARY, RESULTS AND CONCLUSIONS. 167-177  

5.1 Summary 167  

5.2 Results and conclusions 175  

5.3 Implications 177  

5.4 Suggestions for further research 177
