LIST OF TABLES

1. Characteristics of sunflower varieties
2. Characteristics of safflower varieties
3. Distribution of pulp based industries in Karnataka State.
5. Physico chemical analysis of pulp mill effluent with ISI tolerance limit value for the discharge of industrial effluent or irrigation purpose
6. Effect of pulp mill effluent on seed germination of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)
7. Effect of pulp mill effluent on seedling development of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)
8. Effect of pulp mill effluent in fresh and dry weights (gm seedling-1) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)
9. Photosynthetic pigment contents (mg gm⁻¹ fresh weight) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9) seedlings grown in different concentration of pulp mill effluent.
10. Changes in reducing sugar and non reducing sugar content (mg gm⁻¹ fresh weight) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9) treated with different concentration of pulp mill effluent.
11. Mineral contents (mg gm⁻¹ dry weight) in shoot and root of sunflower (Helianthus annus [L] MSFH-17) grown in different concentration of pulp mill effluent.
12. Mineral content (mg gm⁻¹ dry weight) in safflower (Carthamus tinctorius [L] Var. MKH-9) seedling grown in different concentration of pulp mill effluent.
13. Effect of pulp mill effluent on the root length (cm plant⁻¹) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)
14. Effect of pulp mill effluent on the shoot length (cm plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

15. Effect of pulp mill effluent on the lateral roots (No plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

16. Effect of pulp mill effluent on the number of primary branches (No plant$^{-1}$) of safflower (Carthamus tinctorius [L] Var. MKH-9)

17. Effect of pulp mill effluent on the number of leaves (No plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

18. Effect of pulp mill effluent on the total leaf area (cm$^2$ plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

19. Effect of pulp mill effluent on root dry weight (gm plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

20. Effect of pulp mill effluent on stem dry weight (gm plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

21. Effect of pulp mill effluent on leaf dry weight (gm plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

22. Effect of pulp mill effluent on total dry weight (gm plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

23. Effect of pulp mill effluent on below the ground biomass (gm plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17 and safflower (Carthamus tinctorius [L] Var. MKH-9).

24. Effect of pulp mill effluent on above the ground biomass (gm plant$^{-1}$) of sunflower (Helianthus annuus [L] Var. MSFH-17 and safflower (Carthamus tinctorius [L] Var. MKH-9).
25. Effect of pulp mill effluent on Net primary productivity of (gm plant$^{-1}$) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9).

26. Effect of pulp mill effluent on net primary productivity of stem (gm plant$^{-1}$) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9).

27. Effect of pulp mill effluent on net primary productivity of leaf (gm plant$^{-1}$) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9).

28. Effect of pulp mill effluent on flower size (cm$^2$ flower$^{-1}$) of sunflower (Helianthus annus [L] Var. MSFH-17).

29. Effect of pulp mill effluent on capsules (No plant$^{-1}$) of safflower (Carthamus tinctorius [L] Var. MKH-9).

30. Yield parameters of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] MKH-9) grown in different concentration of pulp mill effluent.

31. Effect of pulp mill effluent on Harvest index of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

32. Effect of pulp mill effluent on chlorophyll – a content (mg gm$^{-1}$ fresh weight) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

33. Effect of pulp mill effluent on chlorophyll – b content (mg gm$^{-1}$ fresh weight) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

34. Effect of pulp mill effluent on carotene content (mg gm$^{-1}$ fresh weight) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

35. Effect of pulp mill effluent on Total chlorophyll content (mg gm$^{-1}$ fresh weight) of sunflower (Helianthus annus [L] Var. MSFH-17) and safflower (Carthamus tinctorius [L] Var. MKH-9)

36. Effect of pulp mill effluent on reducing sugar content (mg gm$^{-1}$ fresh weight) of sunflower (Helianthus annus [L] Var. MSFH-17)
37. Effect of pulp mill effluent on reducing sugar content (mg gm\(^{-1}\) fresh weight) of safflower (Carthamus tinctorius [L] Var. MKH-9)

38. Effect of pulp mill effluent on non reducing sugar content (mg gm\(^{-1}\) fresh weight) of sunflower (Helianthus annus [L] Var. MSFH-17)

39. Effect of pulp mill effluent on non reducing sugar content (mg gm\(^{-1}\) fresh weight) of safflower (Carthamus tinctorius [L] Var. MKH-9)

40. Effect of pulp mill effluent on crude protein content (mg gm\(^{-1}\) dry weight) of sunflower (Helianthus annus [L] Var. MSFH-17)

41. Effect of pulp mill effluent on crude protein content (mg gm\(^{-1}\) dry weight) of safflower (Carthamus tinctorius [L] Var. MKH-9)

42. Effect of pulp mill effluent on nitrogen content (mg gm\(^{-1}\) dry weight) of sunflower (Helianthus annus [L] Var. MSFH-17)

43. Effect of pulp mill effluent on nitrogen content (mg gm\(^{-1}\) dry weight) of safflower (Carthamus tinctorius [L] Var. MKH-9)

44. Effect of pulp mill effluent on phosphorous content (mg gm\(^{-1}\) dry weight) of sunflower (Helianthus annus [L] Var. MSFH-17)

45. Effect of pulp mill effluent on phosphorous content (mg gm\(^{-1}\) dry weight) of safflower (Carthamus tinctorius [L] Var. MKH-9)

46. Effect of pulp mill effluent on potassium content (mg gm\(^{-1}\) dry weight) of sunflower (Helianthus annus [L] Var. MSFH-17)

47. Effect of pulp mill effluent on potassium content (mg gm\(^{-1}\) dry weight) of safflower (Carthamus tinctorius [L] Var. MKH-9)

48. Effect of pulp mill effluent on calcium content (mg gm\(^{-1}\) dry weight) of sunflower (Helianthus annus [L] Var. MSFH-17)

49. Effect of pulp mill effluent on calcium content (mg gm\(^{-1}\) dry weight) of safflower (Carthamus tinctorius [L] Var. MKH-9)

50. Effect of different concentration of pulp mill effluent irrigation on physicochemical characteristics of the soil (Before sowing and After harvesting).
