4.1.2 Development of parsers for search algorithms 50
4.1.3 Development of data storage models 54
  4.1.1.1 XML Schema 54
  4.1.1.2 MySQL database architecture 56
4.1.4 Development of software module for calculating 57
  False Discovery Rate

4.2 Development of genome annotation module 61
  4.2.1 Development of software for six-frame translation database 61
  4.2.2 Development of a system for submitting searches 62
  4.2.3 Development of modules for genome mapping 64
  4.2.4 Development of GUI for display of search results 66

4.3 Use of genome annotation module for genome annotation 67
  of Anopheles gambiae mosquito
  4.3.1 Generation of MS/MS data 67
  4.3.2 Designing the annotation workflow 68
  4.3.3 Generation of genome and protein database 70
    and database searching
  4.3.4 Execution of the genome annotation workflow 70
    using MS-Analysis Suite

4.4 Development of software for handling proteomic and pathway data 71
  4.4.1 Development of software for handling proteomic data 71
    4.4.1.1 Development of semi-automatic data 72
      and author tracking system for Human Proteinpedia
4.4.1.2 Development of Python data parsers to process proteomic results from different search engines for Human Proteinpedia

4.4.2 Development of software for handling pathway data

4.4.2.1 Designing the database schema

4.4.2.2 Development of the annotation workflow, web portal and import/export of pathway data

4.4.2.3 Development of software for automated display of pathway network

4.4.2.4 Development of Application Programming Interface

4.4.2.5 Development of NetPath, a resource for human signaling pathways, using PathBuilder

Chapter 5. Results and Discussions

Chapter 6. References

Chapter 7. Appendix

7.1 Manuscripts included in this thesis

7.2 Manuscripts published/submitted during my Ph.D. but not included in the thesis
