List of Tables

Chapter 1

Introduction

Table 1.4.1: Body parts affected by Dermatophytosis

Table 1.6.1: Antifungal medications their uses and side effects

Chapter 2

Review of literature

Table 2.1: The Antimicrobial Era: Plants Secondary Metabolites

Table 2.2.1: Natural antifungals derived from plants

Table 2.3.1: Antimicrobial activity of *Calotropis* species

Table 2.5.1: Chemicals isolated from various parts of *Calotropis* species

Table 2.6.1: Activity of some medicinal plants against dermatophytes

Chapter 4

Results

Table 4.1: Yield of solvent leaf extracts of *Calotropis procera* with the respective solvent

Table 4.2: Effect of petroleum ether leaf extract of *C.procera* on colony diameter of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods

Table 4.3: Effect of chloroform leaf extract of *C.procera* on colony diameter of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods

Table 4.4: Effect of ethyl acetate leaf extract of *C.procera* on colony diameter of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods

Table 4.5: Effect of ethyl alcohol leaf extract of *C.procera* on colony diameter of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods

Table 4.6: Effect of petroleum ether leaf extract of *C.procera* on mycelial weight of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods

Table 4.7: Effect of chloroform leaf extract of *C.procera* on mycelial weight of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods

Table 4.8: Effect of ethyl acetate leaf extract of *C.procera* on mycelial weight of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods

Table 4.9: Effect of ethyl alcohol leaf extract of *C.procera* on mycelial weight of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods

Table 4.10: Effect of petroleum ether leaf extract of *C.procera* on sporulation of *M. fulvum* and percent inhibition (% inh.) as a function of incubation periods
Table 4.11: Effect of chloroform leaf extract of C.procera on sporulation of M. fulvum and percent inhibition (% inh.) as a function of incubation periods

Table 4.12: Effect of ethyl acetate leaf extract of C.procera on sporulation of M. fulvum and percent inhibition (% inh.) as a function of incubation periods

Table 4.13: Effect of ethyl alcohol leaf extract of C.procera on sporulation of M. fulvum and percent inhibition (% inh.) as a function of incubation periods

Table 4.14: Effect of petroleum ether leaf extract of C.procera on colony diameter of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.15: Effect of chloroform leaf extract of C.procera on colony diameter of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.16: Effect of ethyl acetate leaf extract of C.procera on colony diameter of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.17: Effect of ethyl alcohol leaf extract of C.procera on colony diameter of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.18: Effect of petroleum ether leaf extract of C.procera on mycelial weight of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.19: Effect of chloroform leaf extract of C.procera on mycelial weight of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.20: Effect of ethyl acetate leaf extract of C.procera on mycelial weight of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.21: Effect of ethyl alcohol leaf extract of C.procera on mycelial weight of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.22: Effect of petroleum ether leaf extract of C.procera on sporulation of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.23: Effect of chloroform leaf extract of C.procera on sporulation of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.24: Effect of ethyl acetate leaf extract of C.procera on sporulation of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.25: Effect of ethyl alcohol leaf extract of C.procera on sporulation of M. canis and percent inhibition (% inh.) as a function of incubation periods

Table 4.26: Effect of petroleum ether leaf extract of C.procera on colony diameter of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.27: Effect of chloroform leaf extract of C.procera on colony diameter of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.28: Effect of ethyl acetate leaf extract of C.procera on colony diameter of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.29: Effect of ethyl alcohol leaf extract of C.procera on colony diameter of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods
Table 4.30: Effect of petroleum ether leaf extract of C.procera on mycelial weight of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.31: Effect of chloroform leaf extract of C.procera on mycelial weight of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.32: Effect of ethyl acetate leaf extract of C.procera on mycelial weight of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.33: Effect of ethyl alcohol leaf extract of C.procera on mycelial weight of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.34: Effect of petroleum ether leaf extract of C.procera on sporulation of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.35: Effect of chloroform leaf extract of C.procera on sporulation of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.36: Effect of ethyl acetate leaf extract of C.procera on sporulation of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.37: Effect of ethyl alcohol leaf extract of C.procera on sporulation of T. mentagrophytes and percent inhibition (% inh.) as a function of incubation periods

Table 4.38: Effect of petroleum ether leaf extract of C.procera on colony diameter of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.39: Effect of chloroform leaf extract of C.procera on colony diameter of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.40: Effect of ethyl acetate leaf extract of C.procera on colony diameter of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.41: Effect of ethyl alcohol leaf extract of C.procera on colony diameter of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.42: Effect of petroleum ether leaf extract of C.procera on mycelial weight of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.43: Effect of chloroform leaf extract of C.procera on mycelial weight of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.44: Effect of ethyl acetate leaf extract of C.procera on mycelial weight of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.45: Effect of ethyl alcohol leaf extract of C.procera on mycelial weight of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.46: Effect of petroleum ether leaf extract of C.procera on sporulation of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.47: Effect of chloroform leaf extract of C.procera on sporulation of A.niger and percent inhibition (% inh.) as a function of incubation periods

Table 4.48: Effect of ethyl acetate leaf extract of C.procera on sporulation of A.niger and percent inhibition (% inh.) as a function of incubation periods
Table 4.49: Effect of **ethyl alcohol** leaf extract of *C. procera* on **sporulation** of *A. niger* and percent inhibition (% inh.) as a function of incubation periods

Table 4.50: Effect of **petroleum ether** leaf extract of *C. procera* on **colony diameter** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.51: Effect of **chloroform** leaf extract of *C. procera* on **colony diameter** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.52: Effect of **ethyl acetate** leaf extract of *C. procera* on **colony diameter** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.53: Effect of **ethyl alcohol** leaf extract of *C. procera* on **colony diameter** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.54: Effect of **petroleum ether** leaf extract of *C. procera* on **mycelial weight** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.55: Effect of **chloroform** leaf extract of *C. procera* on **mycelial weight** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.56: Effect of **ethyl acetate** leaf extract of *C. procera* on **mycelial weight** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.57: Effect of **ethyl alcohol** leaf extract of *C. procera* on **mycelial weight** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.58: Effect of **petroleum ether** leaf extract of *C. procera* on **sporulation** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.59: Effect of **chloroform** leaf extract of *C. procera* on **sporulation** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.60: Effect of **ethyl acetate** leaf extract of *C. procera* on **sporulation** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.61: Effect of **ethyl alcohol** leaf extract of *C. procera* on **sporulation** of *A. fumigatus* and percent inhibition (% inh.) as a function of incubation periods

Table 4.62: Antifungal activity of *C. procera* leaf extract against test fungi by paper disc diffusion method and MIC

Table 4.63: Summary of phytochemical screening

Table 4.64: Total ionic chromatogram (GC/MS) of ethyl alcohol leaf extract of *plant Calotropis procera* obtained with 70 eV using AB inno-wax fused silica capillary column with He gas as the carrier.

Table 4.65: Details of chromatographic fractionation of ethanol extract

Table 4.66: The bioactivity of the compound CPR8 against test fungal pathogens

Table 4.67: The bioactivity of the pure compound EE91-9 compared to the antibiotic against test fungal pathogens

Table 4.68: Total ionic chromatogram (GC–MS) of bioactive compound CPR-8 of plant *Calotropis procera* obtained with 70 eV using AB inno-wax fused silica capillary column with He gas as the carrier.
Table 4.69: Total ionic chromatogram (GC–MS) of bioactive compound EE91-9 of plant Calotropis procera obtained with 70 eV using AB inno-wax fused silica capillary column with He gas as the carrier.

Table 4.70: Antifungal activity of compounds of fraction (CPR4) by paper disc diffusion method

Table 4.71: Total ionic chromatogram (GC–MS) of bioactive compound CPR-4 of plant Calotropis procera obtained with 70 eV using AB inno-wax fused silica capillary column with Helium gas as the carrier.

Table 4.72: The bioactivity of the eluted fraction (CPR9) compared to the crude extract against five fungal pathogens

Table 4.73: Total ionic chromatogram (GC–MS) of bioactive compound EE91-9 of plant Calotropis procera obtained with 70 eV using AB inno-wax fused silica capillary column with He gas as the carrier.

Table 4.74: The bioactivity of the eluted fraction EE73-1 compared to the crude extract against five fungal pathogens

Table 4.75: Total ionic chromatogram (GC/MS) of bioactive compound EE91-9 of plant Calotropis procera obtained with 70 eV using AB inno-wax fused silica capillary column with He gas as the carrier.

Table 4.76: The bioactivity of the eluted fraction EE91-10 compared to the crude extract against five fungal pathogens

Table 4.77: Total ionic chromatogram (GC/MS) of bioactive compound EE91-10 of plant Calotropis procera obtained with 70 eV using AB inno-wax fused silica capillary column with He gas as the carrier.
